

November 23, 2009

Mr. Roy Crossland START Project Officer U.S. Environmental Protection Agency, Region 7 901 North 5th Street Kansas City, Kansas 66101

Subject:

Phase I Targeted Brownfields Assessment

Recovery-West High Complex, 1810 and 1829 Madison Avenue, Kansas City, Missouri

U.S. EPA Region 7, START 3, Contract No. EP-S7-06-01, Task Order No. 0163

Task Monitor, Ron King, EPA Site Assessment Team Leader

Dear Mr. Crossland:

Tetra Tech EM Inc. is submitting the attached Phase I Targeted Brownfields Assessment (TBA) report for the Recovery-West High School Complex, also known as the Switzer School Complex, located at 1810 and 1829 Madison Avenue in Kansas City, Missouri. This TBA was completed in accordance with industry standard practice for Phase I Environmental Site Assessments.

If you have any questions or comments regarding this submittal, please call Jeffrey Mitchell at (816) 412-1773.

Sincerely,

Jeffrey Mitchell

Jeffing Mitchell

START Project Manager

Ted Faile, PG, CHMM START Program Manager

EXECUTIVE SUMMARY

The Tetra Tech EM Inc. (Tetra Tech) Region 7 Superfund Technical Assessment and Response Team (START) was tasked by the U.S. Environmental Protection Agency (EPA) Region 7 Superfund Division to conduct a Phase I Targeted Brownfields Assessment (TBA) on the Recovery-West High Complex and Annex (former West High School and West High Annex) located at 1810 and 1829 Madison Avenue (aka, 1936 Summit), in Kansas City, Jackson County, Missouri (subject property). The City of Kansas City, Missouri, Department of City Planning and Development applied for the EPA Brownfields grant for the subject property under the name "West High Complex / Switzer School." START generally conducted this TBA in accordance with the *Standard Practice for Environmental Site Assessments: Phase I ESA Process*, ASTM International (ASTM) designation E 1527-05, and otherwise in compliance with EPA's "All Appropriate Inquiries" Rule (AAI Rule) (40 *Code of Federal Regulations* [CFR] Part 312).

The purpose of the TBA is to identify recognized environmental conditions (REC) associated with the subject property and to identify the nature of contamination and the risks posed by the contamination, if present. RECs include the presence or likely presence of any hazardous substances or petroleum products, even under conditions that comply with applicable laws, that present a material risk of harm to public health or the environment (ASTM 2005 [Section 1.1.1 E]).

The West High subject property is currently two unused school buildings surrounded by high-density residential and commercial development. The subject property includes the West High Annex area and the West High Complex area, which are contiguous properties opposite each other across Madison Avenue. The West High Annex area encompasses approximately 2.4 acres, and the West High Complex area encompasses approximately 2.24 acres. The subject property is roughly bounded by W. 18th Street on the north, Summit Street on the east, W. 20th Street on the south, and Belleview Avenue and West Pennway on the west. The subject property is currently owned by School District of Kansas City, Missouri, Building Corporation (MBC), a not-for-profit corporation. Through a specific part of the Missouri statutory framework, the MBC was established as an independent legal entity which owns the buildings used by the KCMSD. By using this structure, the Kansas City Missouri School District (KCMSD) could issue/obtain funding through school construction bonds. START worked with representatives from the Kansas KCMSD and the MBC to obtain access to interior areas of the building. A school operated on portions of the subject property from 1889 to 2005; Ms. Teresa C. Pacheco, Real Estate Specialist with the KCMSD, is considered the key site manager for the subject property.

This assessment has revealed evidence of three RECs in connection with the subject property based on site reconnaissance and a review of a previous Phase I ESA:

Due to the age of the subject property, fuel oil used for heating purposes was likely stored in at least one aboveground storage tank (AST) or underground storage tank (UST) in the West High Complex building. However, any such tank has since been removed, and was not visually observed during site reconnaissance. The condition of the floor in the basement, which had standing water and mold growth, prevented any assessment of fuel oil staining or a possible fuel oil release. START was unable to obtain any written documentation related to the removal or closure of an AST or UST. Given the lack of information obtained regarding tank removal or closure, a release from a former tank cannot be precluded. Probable storage of fuel oil and presence of an AST or UST pose a REC to the subject property.

According to a previous Phase I ESA conducted on the subject property, the lot was graded with unknown fill during its construction between 1889 and 1955 (Tetra Tech 2008). The age and unknown origin of this fill material poses a REC to the subject property.

All rooms in the West High Complex building were visually assessed for the presence of lead-based paint (LBP), asbestos-containing building materials (ACBM), and mold-impacted materials. Visual assessments found suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth in areas throughout the West High Complex building. The presence of suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth poses a REC to the subject property. A full survey for LBP, ACBM, and mold-impacted materials, including sampling to definitively identify any suspected hazardous materials and to determine the genus and species of observed mold growths, will be submitted to the EPA in a separate report. In addition to the hazardous materials listed above, the survey will address possible polychlorinated biphenyl (PCB) in caulking associated with windows, doors and masonry columns. Based on recent EPA guidance, caulking containing PCBs is a concern in buildings constructed or renovated between 1950 and 1978.

Based on the identification of the RECs, START recommends the following:

• A limited Phase II ESA TBA at the subject property to verify the presence or absence of (1) any fuel tanks or areas impacted by releases from such tanks, or (2) contamination associated with unidentified fill materials.

• A full survey for LBP, ACBM, PCB (in caulking), and mold-impacted materials, including sampling to definitively identify any suspected hazardous materials and to determine the genus and species of observed mold growths. Results of the full survey for LBP, ACBM, PCB, and mold-impacted materials will be submitted to the EPA in a separate report.

1.0 INTRODUCTION

The Tetra Tech EM Inc. (Tetra Tech) Region 7 Superfund Technical Assessment and Response Team (START) was tasked by the U.S. Environmental Protection Agency (EPA) Region 7 Superfund Division to conduct a Phase I Targeted Brownfields Assessment (TBA) on the Recovery-West High Complex and Annex (former West High School and West High Annex) located at 1810 and 1829 Madison Avenue (aka, 1936 Summit), in Kansas City, Jackson County, Missouri. The City of Kansas City, Missouri, Department of City Planning and Development applied for the EPA Brownfields grant for the subject property under the name "West High Complex / Switzer School." The subject property consists of two unused school buildings surrounded by high-density residential and commercial development.

START conducted this TBA of the property in accordance with the Standard Practice for Environmental Site Assessments: Phase I ESA Process, ASTM International (ASTM) designation E 1527-05, and otherwise in compliance with EPA's "All Appropriate Inquiries" Rule (AAI Rule) (40 *Code of Federal Regulations* [CFR] Part 312), for the subject property located at 1810 and 1829 Madison Avenue (aka, 1936 Summit), in Kansas City, Jackson County, Missouri (see Figure 1, Appendix A). For the purpose of this TBA, the users are identified as EPA; the school District of Kansas City, Missouri, Building Corporation (MBC); and the Kansas City Missouri School District (KCMSD). EPA tasked START to conduct a TBA on the subject property to identify recognized environmental conditions (REC) associated with the property and to identify the nature of contamination and the risks posed by the contamination, if present.

For the purpose of this TBA, the subject property is defined as the approximately 2.4-acre West High Annex area and the approximately 2.24-acre West High Complex area.

1.1 PURPOSE

The goal of this TBA is to identify RECs to the subject property. RECs are the presence or likely presence of any hazardous substances or petroleum products on a subject property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the subject property or into the ground, groundwater, or surface water of the subject property. The term includes hazardous substances or petroleum products, even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies (ASTM 2005 [Section 1.1.1]). Historical recognized environmental conditions (HREC) are

environmental conditions that in the past would have been considered RECs, but that may or may not be considered RECs currently (ASTM 2005 [Section 3.2.39]).

This TBA is intended to satisfy one of the requirements for the innocent landowner defense, the contiguous property exemption, and the bona fide prospective purchaser exemption to Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the subject property consistent with good customary practice," as defined in 42 U.S. Code Section 9601 (35) (B).

1.2 SCOPE OF WORK

EPA developed a Statement of Work (SOW) for TBA activities to be performed at the 1810 and 1829 Madison Avenue properties. The SOW, based on ASTM designation ASTM E 1527-05, was to identify RECs to the subject property. Phase I TBAs typically are conducted in a four-phase process, including: (1) records review; (2) site reconnaissance; (3) interviews with current owners and occupants of the subject property, and local government agencies; and (4) preparation of a report. Section 11.0 lists sources referenced during this TBA.

Any items listed in the ASTM standard that the report does not specifically identify as present can be assumed not present within the subject property or within such distance to the subject property as to be of potential concern to the subject property. Any item mentioned but not specifically identified as a REC can be assumed not a REC.

1.3 SIGNIFICANT ASSUMPTIONS

The following are beyond the scope of this evaluation: sampling and analysis for radon in indoor air and for lead in water, soil, and groundwater; evaluations of indoor and/or outdoor air quality, regulatory compliance, industrial hygiene, and noise impacts; and identification of geological or geotechnical hazards.

1.4 **DEVIATIONS**

Deletions or deviations from ASTM E 1527-05 are as follows. For each deviation noted, the START Environmental Professional (EP) has conducted an analysis of the data gaps or failures, and impacts of these on START's ability to render an opinion regarding conditions indicative of releases or threatened releases of petroleum products or hazardous substances.

- No historical records were available for the period from 1889, year of the initial property transfer, to 1924. Beginning in 1924, the year of the earliest available historical record, a time gap of more than 5 years was noted in available historical information between 1940 and 1952. Based on the consistent, observed use of the subject property in all reviewed historical information, the presence of time gaps does not impact START's ability to render an opinion regarding RECs.
- Because of the age of the property, interviews with previous land owners, operators, or
 occupants were not possible. START was not provided access to or contact information for
 any previous facilities managers. The EP believes that information obtained from past
 owners, operators, or occupants of the subject property likely would not be additional to that
 obtained from other resources.
- START did not perform an environmental lien search for the completion of this report.

1.5 LIMITATIONS AND EXCEPTIONS

This report was compiled based partially on information supplied to START from outside sources and other information in the public domain. The conclusions and opinions herein are based on the information START obtained in compiling the report. This information is on file at START's office in Kansas City, Missouri. START makes no warranty as to the accuracy of statements made by others which may be contained in the report, nor are any other warranties or guarantees, expressed or implied, included or intended by the report except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services. Because the facts forming the basis for the report are subject to professional interpretation, differing conclusions could be reached. START does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations or suggestions does not assure elimination of hazards or the fulfillment of client's obligations under local, state, or federal laws or any modifications or changes to such laws. None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature, but shall be a representation of findings of fact from records examined.

1.6 SPECIAL TERMS AND CONDITIONS

The terms and conditions set forth in START's contract with EPA shall govern this engagement.

1.7 STATEMENT OF USER RELIANCE

START is not required to verify independently the information provided to it by the user or gathered throughout the course of this TBA. For this TBA, EPA Region 7 may rely on information provided unless knowledge is acquired that certain information is incorrect based on additional data obtained during the TBA, or the person preparing this report knows otherwise.

2.0 SITE DESCRIPTION

This section provides a brief description of the subject property and the physical setting based on information obtained from MBC, KCMSD, and a records review prior to the site reconnaissance. Observations during the site reconnaissance regarding current land use of the subject property and adjoining properties are described in Section 4.0.

2.1 SUBJECT PROPERTY LOCATION AND LEGAL DESCRIPTION

For the purposes of the TBA, the subject property is currently two unused school buildings surrounded by high-density residential and commercial development (see Figure 1, Appendix A). The subject property includes the West High Annex area and the West High Complex area, which are contiguous properties opposite each other across Madison Avenue (see Figure 1 and Figure 2, Appendix A). The West High Annex area encompasses approximately 2.4 acres bounded by W. 18th Street on the north, Madison Avenue on the east, Lots 175 through 178 of Block 7 (an excavated area) on the south, and Belleview Avenue and West Pennway on the west. The West High Complex area encompasses approximately 2.24 acres bounded by Lots 219 and 201 of Block 8 on the north, Summit Street on the east, W. 20th Street on the south, and Madison Avenue on the west.

The title for the parent parcel is vested in the MBC, a not-for-profit corporation (Tracts I and II, which contain the main West High buildings), and KCMSD (Tracts III through XIV). The coordinates at the approximate center of the property are 39° 5' 24.5'' north latitude and 94° 35' 39.4'' west longitude.

The legal description of the West High Annex area is:

All of Lot 170, and all of Lots 185 through 192, inclusive, Block 7, except those parts in streets, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, together with the vacated alley adjoining said Lots, plus Lots 165 through 169, inclusive, Block 7, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, plus Lots 171 through 174, inclusive, Block 7, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri

The legal description of the West High Complex area is:

The South 13 feet of 1ot 201, and Lots 202 through 212, Block 8, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, together with the vacated alley adjoining said Lots, and also together with Lots 213 through 217 and the South 10 feet of Lot 218, Block 8, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, together with the vacated alley East of and adjoining said Lots

The description of the parent parcel is included in Appendix B.

2.2 SITE AND VICINITY GENERAL CHARACTERISTICS

The subject property includes two unused school buildings, their outbuildings, and grounds, surrounded by high-density residential and commercial development, within 0.25 mile of the subject property.

2.3 CURRENT AND PAST USES OF THE SUBJECT PROPERTY

The subject property includes two unused school buildings, their outbuildings, and grounds. Property valuation records reviewed show the West High Complex property was a school (Switzer School) as early as 1895 (Tetra Tech 2008). The West High Annex portion of the subject property was a public school from as early as 1955 until at least 2000.

2.4 DESCRIPTIONS OF STRUCTURES, ROADS, OTHER IMPROVEMENTS ON THE SITE

The subject property currently is two unused school buildings—the West High Complex and West High Annex—and their outbuildings and grounds. The West High Annex and the West High Complex buildings are connected by a tunnel under Madison Avenue.

The West High Annex building consists of two floors, an attic, and a basement below grade, with a total building area of 27,260 square feet (Tetra Tech 2008). The grounds north, south, and west of the building are an asphalt playground, with a portable outbuilding west of the main building. The area east of the West High Annex is Madison Street and the West High Complex beyond.

The West High Complex building consists of four separate buildings that include four floors, an attic, a basement, and subbasement, with a total building area of 111,042 square feet (Tetra Tech 2008). The original structure was constructed in 1889. Three additional structures were added to the original building, respectively, between 1889 and 1909, between 1909 and 1940, and between 1952 and 1955 (see Section 6.3 for additional discussion). All four buildings are connected by interior hallways and by basement and subbasement structures. The grounds south and east of the building are asphalt parking area,. The areas north of the subject property are residential. The area west of the West High Complex is Madison Street and the West High Annex beyond.

2.5 CURRENT AND PAST USES OF ADJOINING/SURROUNDING PROPERTIES

The area surrounding the subject property is high-density residential and commercial development. Aerial photographs, fire insurance maps, and other records reviewed (see Appendix C), show that this land use has remained consistent since at least 1895.

2.6 GEOLOGIC, HYDROGEOLOGIC, HYDROLOGIC, AND TOPOGRAPHIC CONDITIONS

The following sections describe the environmental setting of the subject property and surrounding area.

2.6.1 Topography

The subject property is depicted on the United States Geological Survey (USGS) Kansas City, Missouri Topographic Quadrangle Map 7.5-minute series (USGS 1996). The subject property is approximately 845 feet above mean sea level (amsl) at its lowest point at the southwestern corner of the subject property and about 910 feet amsl at its highest point at the northeastern corner of the subject property. The overall topographic gradient slopes southwest. Based on site reconnaissance conducted by START personnel on November 9, 2009, the subject property drains into storm sewers at the southwest corner of the subject property.

2.6.2 Geologic Setting

The subject property is located in Jackson County in western Missouri. According to the Center for Applied Research and Environmental Systems (CARES), the bedrock geology at the subject property is the Kansas City Group of the Missourian series of the Pennsylvanian system (CARES 2008). The Kansas City Group consists of interbedded sandstones, limestones, and shales. The bedrock at the subject property is topped by a clayey-silt and silty-clay decomposition residuum (Tetra Tech 2008).

Soils on the subject property have been mapped as upland Urban Land, with slopes of 9 to 14 percent (United States Department of Agriculture 1984). The complex consists of strongly sloping areas where more than 85 percent of the surface is covered by asphalt, concrete, buildings, or other impervious material

2.6.3 Hydrogeology

Based on information obtained from the USGS Groundwater Atlas of the United States (USGS 1997), the subject property is in an area in which the most important aquifer system is the surficial aquifer, an unconfined aquifer found in stream-valley sands and gravels. Recharge to the stream-valley aquifer is by infiltration of precipitation, seepage of water from the Missouri River to the aquifer during periods of high streamflow, and inflow from bedrock aquifers. Discharge from the aquifer is by evapotranspiration, withdrawals by wells, and seepage to the Missouri River during periods of low streamflow. The general direction of water movement in the stream-valley aquifer is downstream and toward the stream.

No surficial aquifer exists at the site. The site is located south of the more productive Missouri River alluvial aquifer and glacial drift aquifer. Medium plasticity silty clay, capable of producing only small amounts of water, is present at the site above bedrock. A deep aquifer, the Western Interior Plains Aquifer, is located in bedrock beneath the site. Based on the topography of the region, groundwater flow is controlled by the Kansas and Missouri River and flows toward the south and southwest.

Environmental Data Resources, Inc. (EDR), a START subcontractor, identified 45 registered USGS wells, but no registered state or public water supply wells, within a 1-mile radius of the subject property (EDR 2009). All but four of the USGS wells are in the Kansas River bottoms, at elevations approximately 100 feet below the subject property. None of the four wells at elevations comparable to that of the subject property had recorded water level measurements. Given the lack of reported static water levels for wells, no definitive, site-specific groundwater flow information could be determined. Based on a review of topographic maps, the regional topographic gradient in the area of the subject property is toward the south and southwest. In the absence of site-specific data or other indicators, the direction of shallow groundwater flow can be inferred from the regional topographic slope and is, therefore, inferred to the south and southwest. Definitive groundwater flow can be accurately determined only through collection of site-specific groundwater elevation data.

2.6.4 Hydrology

Surface water in the site vicinity appears to follow surface topography and either infiltrates the ground or flows south and southwest toward the Kansas River.

3.0 USER-PROVIDED INFORMATION

The following section summarizes information (if any) provided by EPA Region 7, MBC, and KCMSD with regard to the TBA.

3.1 SUMMARY OF TITLE INFORMATION

Title information for the subject property was reviewed in a previous Phase I environmental site assessment (ESA) report dated October 13, 2008. A copy of the previous Phase I ESA is included in Appendix B. No RECs were indicated from a review of the title information.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

MBC and KCMSD was unaware of any information regarding environmental liens or activity and use limitations for the subject property, and no indications of environmental liens or activity and use limitations were noted in the title information. No environmental liens or activity and use limitations were identified by EDR (EDR 2009).

3.3 SPECIALIZED KNOWLEDGE

A previous Phase I ESA prepared by Tetra Tech in 2008 for the subject property was provided by the KCMSD and was reviewed to complete this report. A copy of this previous Phase I ESA is included in Appendix B.

3.4 OWNER, SUBJECT PROPERTY MANAGER, AND OCCUPANT INFORMATION

According to information obtained from on-site interviews with KCMSD personnel, and a previous Phase I ESA, the subject property is owned by MBC, a not-for-profit corporation. Ms. Teresa C. Pacheco is a Real Estate Specialist with the KCMSD with oversight of the West High West High property, and is considered the key site manager for the subject property. The subject property is currently two unused school buildings.

3.5 REASON FOR PERFORMING PHASE I ESA

This TBA was requested by EPA Region 7 for MBC and KCMSD to provide an environmental assessment of the West High Annex and the West High Complex properties. This TBA intends to satisfy one of the requirements for the innocent landowner defense to CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good customary practice," as defined in 42 U. S. Code Section 9601 (35)(B).

4.0 SITE RECONNAISSANCE

The site reconnaissance was conducted on November 9, 2009, by START team member Ms. Rachel Norton. A resume for Ms. Norton is included as Appendix D. Photographic documentation of the site reconnaissance is in Appendix E.

4.1 METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance consisted of a visual inspection of the subject property in accordance with the requirements set forth in 40 CFR Part 312. The purpose of the site reconnaissance of the subject property was to seek out "conditions indicative of releases or threatened releases" as required by ASTM 1527-05. Its purpose was also to gather information from the current owners or operators about any historical RECs regarding the subject property. START conducted the reconnaissance of the subject property for evidence of the following:

- Use, storage, treatment, disposal, or generation of hazardous substances, "controlled substances," or petroleum products
- Landfills, dumps, or evidence of burial activities or solid waste disposal
- Aboveground storage tanks (AST), underground storage tanks (UST), drums, or containers capable of storing hazardous substances or petroleum products
- Transformers or other electrical or mechanical equipment potentially containing polychlorinated biphenyls (PCB)
- Evidence of petroleum-based heating fuel sources
- Drains, pits, sumps, cisterns, cesspools, or similar receptacles where liquids drain, collect, or are stored
- Pits, ponds, lagoons, or open pools likely to contain hazardous substances or petroleum products or waste
- Staining on pavement or areas of dead, distressed, discolored, or stained vegetation that may indicate RECs
- Grading or fill material that may indicate contaminated soils or dumping
- Chemical smells, petroleum gases, foul odors, wells, and/or other site-specific environmental conditions.

START mobilized to the subject property to observe current conditions, interview the key site manager, and obtain additional information relevant to the TBA. START also observed the exteriors of adjacent and select nearby properties to assess the presence of environmental concerns. START performed the

reconnaissance with the key site manager, defined as the individual most familiar with the environmental history of the subject property. The key site manager for the West High Annex and the West High Complex properties is Ms. Teresa C. Pacheco, Real Estate Specialist with the KCMSD.

Any items listed in the ASTM method not identified in this section can be assumed not present. Likewise, any item mentioned but not identified as a REC can be assumed not a REC. General recommendations for the subject property are summarized in Section 9.0.

4.2 GENERAL SITE SETTING

The following sections describe the subject property's current and past use and exterior and interior features.

4.2.1 Site Description

The subject property is located at 1810 and 1829 Madison Avenue, Kansas City, Jackson County, Missouri. The subject property includes two unused school buildings, their outbuildings, and grounds, and is surrounded by high-density residential and commercial properties.

4.2.2 Current and Past Site Use

Property valuation records reviewed show the West High Complex property was a school as early as 1895. The West High Annex portion of the subject property appears to have been a public school from as early as 1955 until at least 2000. The subject property is currently vacant school buildings.

4.2.3 Exterior Observations

The West High Complex building consists of four separate buildings with four floors, an attic, a basement, and subbasement. All four buildings are connected by interior hallways and by basement and subbasement structures. The grounds south and east of the building are asphalt parking area,. The areas north of the subject property are residential. The area west of the West High Complex is Madison Street and the West High Annex beyond. The West High Complex building consists of four structures connected by interior hallways and by basement and subbasement structures.

The West High Annex building is surrounded to the north, south, and west by an asphalt playground, with a portable outbuilding west of the main building. The area east of the West High Annex is Madison Street and the West High Complex beyond. The subject property is surrounded on all sides by commercial and high-density residential development.

Windows at the West High Complex and the West High Annex are boarded with plywood. The doors are secured with chain locks.

4.2.4 Interior Observations

During the site reconnaissance on November 9, 2009, START was able to access all interior areas of the West High buildings. Interior areas of the West High Complex building were consistent with a school building. Corridors provide access to individual classrooms on floors 1 and 2 of the building. The attic was accessed from the second floor. Concrete floors, plaster walls, drop ceilings and ceiling tiles, and some drywall were the interior building materials observed. A significant amount of the facility's overall footprint is located on the lower levels, on the ground level, in the basement. A complex series of corridors, restrooms, balconies, and storage areas are on the lower ground floor in proximity to the gymnasiums. In addition, a former dance studio and band room are on the lower gymnasium level. A swimming pool and associated locker and restrooms, storage, and tunnels are located on the basement level of the West High Complex building. Tunnels provide access and utility conduits from the West High Complex to the West High Annex.

The West High Annex is a newer building. Neither the attic nor the basement was accessible at the West High Annex. Corridors provide access to individual classrooms on floors 1 and 2 of the building. The floors are tiled, and drop ceiling tiles were observed. A cafeteria and restrooms were also observed.

4.3 SPECIFIC RECONNAISSANCE ITEMS

The following sections are related to items observed during reconnaissance.

4.3.1 Hazardous Substances and Petroleum Products

A 55-gallon plastic container of Polar RV antifreeze, several gallons of oil-based paint, and a small container of a polish stripping solution were observed on the first floor of the West High Annex. No other evidence of hazardous substances or petroleum products was noted on the subject property. A detailed inventory of additional chemical materials that were observed in the West High Complex and the West High Annex during site reconnaissance will be submitted to the EPA in a separate report. The presence of the antifreeze, paint, and stripping solution does not pose a REC to the subject property.

4.3.2 Hazardous Waste

Old computer monitors were observed in rooms throughout the subject property. Given the condition of the monitors and the condition of the rooms in which they were stored, it is likely that the monitors are no

longer useable and should be considered waste. Waste computer monitors may contain regulated amounts of lead and may be hazardous waste if disposed of. Waste-like cleaning chemicals and off-specification paint also were observed in rooms throughout the subject property. Waste-like cleaning chemicals and off-specification paint may be characteristically ignitable or toxic hazardous waste. Although monitors and waste-like cleaning chemicals and paint may be hazardous waste, their presence on the subject property does not constitute a release or material threat of release to the subject property; their presence is considered a de minimis condition and not a REC at this time.

4.3.3 Landfills, Dumps, Burials, or Solid Waste Disposal

No landfills, dumps, or evidence of burial activities was observed on the subject property. Significant amounts of waste-like educational supplies remain on the subject property from previous use. These materials may be reused or disposed. START did not observe any uncontrolled solid waste disposal on the subject property. The presence of the solid waste on the subject property does not pose a REC to the subject property.

4.3.4 Storage Tanks

Underground Storage Tanks

No visual evidence of past or present on-site USTs—including pipes, pumps, or stains—was apparent during the site reconnaissance.

Aboveground Storage Tanks

No visual evidence of past or present on-site ASTs—including pipes, pumps, or stains—was apparent during the site reconnaissance.

4.3.5 Polychlorinated Biphenyls (PCB) -containing Equipment

START observed utility poles on the south side of the subject property that contained four electric transformers, all of which were labeled "non-PCB" (see Figure 2, Appendix A; and Photolog, Appendix E). A utility pole on the north boundary of the subject property on Madison Street had one pole-mounted transformer, which was not labeled "non-PCB." Although this transformer may contain PCBs, it was in good condition, with no evidence of leaks. The presence of these pole-mounted transformers does not pose a REC to the subject property.

4.3.6 Heating, Ventilation, and Air Conditioning System and Fuel Source

The West High Complex building is currently heated by natural-gas powered boilers. Access to the boilers is from the basement and ground floor levels. Evidence of historic coal usage was observed. A large metal hatch door was observed in the boiler room but was not opened. Given the age of the building, it is likely that the boilers were converted from coal to fuel oil before their ultimate conversion to natural gas.

Boilers were not observed in the West High Annex building. According to Ms. Pacheco, heating, ventilation, and air conditioning (HVAC) for the West High Annex is supplied by equipment located in the West High Complex building.

4.3.7 Drains, Sumps, Pools of Liquids, Standing Water, Cisterns, and Cesspools

The West High Complex Building has taken on a substantial amount of water on the lower floors as indicated by deteriorated plaster, stained building materials such as drywall and ceiling tiles, warped wood floors, and visible mold. Drains and some standing water were observed in the basement and throughout some hallways and classrooms on the lower ground level of the building. The standing water appeared to be related to windows that had been broken on the north side on the complex. The drains appeared to be connected to city sewer services. Sumps were not observed. No drains, sumps, pools of liquid, standing water, cisterns, or cesspools were observed outside the building. The West High Annex was in good condition during site reconnaissance, and no drains, sumps, pools of liquid, standing water, cisterns, or cesspools were observed at the West High Annex, however, a basement was not accessed at the West High Annex.

4.3.8 Pits, Ponds, and Lagoons

No pits, ponds, lagoons, or open pools likely to contain or to have been used in the disposal of hazardous substance or petroleum products, or for waste disposal or waste treatment, were observed on the subject property.

4.3.9 Stains or Corrosion and Stained Soil or Pavement

No corrosion or stained soil was observed, and no stained pavement was observed outside the buildings on the subject property. Stained concrete flooring was observed in the basement of the West High Complex building, in an area of standing water. The stained concrete does not pose a REC to the subject property.

4.3.10 Areas of Dead, Distressed, Discolored, or Stained Vegetation

No areas of dead, distressed, discolored, or stained vegetation that indicate RECs were observed on the subject property.

4.3.11 Possible Fill, Grading, or Solid Waste Disposal

According to a previous Phase I ESA conducted on the subject property, the lot was graded with unknown fill during its construction between 1889 and 1955 (Tetra Tech 2008). The age and unknown origin of this fill material pose a REC to the subject property. No solid waste disposal was observed during the site reconnaissance.

4.3.12 Smells of Chemical Gases, Petroleum Products, or Noxious Odors

No smells of chemical gases, petroleum products, or noxious odors were noted at the time of the site reconnaissance.

4.3.13 Wastewater and Stormwater Systems and Discharges

No wastewater systems or discharges were observed on the subject property. Stormwater runoff is directed into street-level storm sewers.

4.3.14 Wells and Potable Water Supply

No dry, irrigation, injection, abandoned, or other wells were observed on the subject property.

4.3.15 Utilities

Electrical power is supplied to the site by Kansas City Power and Light through overhead power lines and five pole-mounted electric transformers (see Figure 2, Appendix A and Photolog, Appendix E). Natural gas service is provided by Missouri Gas Energy. Water and wastewater services are provided by the City of Kansas City, Missouri.

4.3.16 Other Site-specific Environmental Conditions

All rooms in the West High Complex and West High Annex buildings were visually assessed for the presence of lead-based paint (LBP), asbestos containing building materials (ACBM), and mold-impacted materials. Visual assessments found suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth in multiple areas. A full survey for LBP, ACBM, and mold-impacted materials, including sampling to definitively identify any suspected hazardous materials

and to determine the genus and species of observed mold growths, will be submitted to the EPA in a separate report. No other site-specific environmental conditions were noted during the site reconnaissance.

4.4 VICINITY RECONNAISSANCE

The subject property is in a residential neighborhood. The areas on north, east, and west of the subject property are residential. The southern boundary of the subject property is 20th Street and the West Side Library, with residences, commercial properties, and a community center beyond.

The southwestern corner of the subject property is bounded by an excavated pit. This pit is the former location of Edcor Safety Equipment (Tetra Tech 2008) (see Section 6.3.4). An interview with the key site manager revealed that the former Edcor Safety Equipment building located on the southwestern corner of the subject property was demolished and the building debris was left below grade. Hazardous materials such as asbestos and lead, which are commonly associated with building materials, could be present below grade in this excavated area. However, given the nature of the materials and the presumed direction of groundwater flow, it is unlikely that asbestos or lead would migrate onto the subject property. Reconnaissance of that vicinity of the subject property did not reveal any RECs.

5.0 INTERVIEWS

The objective of conducting interviews is to obtain information concerning RECs in connection with the subject property. This information was obtained verbally, as indicated below. Interviewees were cooperative and forthcoming with information, unless otherwise specified. Contact information for all individuals interviewed is included as Appendix F.

5.1 INTERVIEW WITH OWNER

Through a specific part of the Missouri statutory framework, the MBC was established as an independent legal entity which owns the buildings used by the KCMSD. By using this structure, the KCMSD could issue/obtain funding through school construction bonds. MBC, a not-for-profit corporation, is the subject property owner. Representatives of KCMSD accompanied START during site reconnaissance. START interviewed Mr. Leonard Brewer, the KCMSD security officer overseeing the West High Complex.

START interviewed Mr. Brewer in person in regards to the subject property. Mr. Brewer was not aware of: (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property, or (3) any notices from any government entity regarding any possible environmental violations relating to hazardous substances or petroleum products.

5.2 INTERVIEW WITH KEY SITE MANAGER

Ms. Teresa C. Pacheco, Real Estate Specialist with KCMSD, is the facilities manager with oversight of the West High property and is considered the key site manager for the subject property. START interviewed Ms. Pacheco in person to determine past and current uses of the subject property. In addition, START provided a Transaction Screen ESA questionnaire to Ms. Pacheco via email on November 9, 2009. To date, a copy of this ESA questionnaire has not been received from the key site manager at KCMSD.

The interview with the key site manager revealed that the former Edcor Safety Equipment building located on the southwestern corner of the subject property was demolished and the building debris was left below grade. Hazardous materials such as asbestos and lead, which are commonly associated with building materials, could be present below grade. However, given the nature of the materials and the presumed direction of groundwater flow, it is unlikely that asbestos or lead would migrate onto the subject property.

5.3 INTERVIEW WITH CURRENT OCCUPANTS

The subject property is not currently occupied.

5.4 INTERVIEW WITH PAST SUBJECT PROPERTY OWNERS/OCCUPANTS

KCMSD assumed control of the West High Complex property in 1895 and the West High Annex property in 1955. No interview with past subject property owners or occupants was possible.

5.5 INTERVIEW WITH OCCUPANTS OF NEIGHBORING PROPERTIES

Surrounding properties are developed as residential. Interviews with surrounding property owners or occupants were not likely to provide material information regarding potential contamination at the subject property that would not have been identified from interviews with the property owner or key site manager.

5.6 INTERVIEW WITH LOCAL GOVERNMENT OFFICIALS

START reviewed an interview with the City of Kansas City, Missouri (KCMO), Office of Environmental Quality (OEQ) to determine if any illegal dumping or other environmental incidents had been reported to the City. Ms. Sherri Lewis consulted OEQ records for the subject property addresses (1810 and 1820 Madison Avenue) and for nearby blocks on Madison Avenue and Summit Street. Ms. Lewis did not find any reports of environmental incidents for the subject property or for nearby blocks on Madison Avenue and Summit Street. She did have a 1982 report of inadequate building conditions for the 1810 Madison Avenue building (for example, leaking roof and unsanitary bathrooms) (Tetra Tech 2008). The building condition report does not pose a REC to the subject property.

A review of an interview with the Kansas City Missouri Fire Department (KCMFD) was conducted (Tetra Tech 2008). This interview does not reveal any RECs to the subject property.

6.0 RECORDS REVIEW

The purpose of the records review is to obtain and review records that will help identify RECs in connection with the subject property. Historical records reviewed are included in Appendix C.

6.1 ENVIRONMENTAL RECORDS SOURCES

The following sources of environmental records were accessed and reviewed as part of this assessment.

6.1.1 Environmental Database Search

Federal, state, regional, and local records were reviewed to assess whether the subject property or surrounding properties have undergone significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects. EDR performed a database search of the subject property in accordance with the ASTM E 1527-05 (EDR 2009). A copy of this report is included as Appendix G.

The databases searched have been developed and are updated by federal, state, and local agencies. While these databases generally are reliable and comprehensive, cases in which data are out of date and no longer reflect actual property conditions may occur. The Government Records Searched/Data Currency Tracking section of the environmental report identifies when each record was updated (see Appendix G).

The database search identifies properties with environmental records from numerous federal, state, tribal, and local regulatory agencies, and their distances from a specified geographic location (typically the perimeter of the subject property). The environmental databases searched and their recommended search radii are listed on the Map Findings Summary on pages 4 through 6 of Appendix G.

START reviewed the facilities listed within the EDR Report (EDR 2009), as summarized below. The center of the radius search was the outline of the subject property.

- The subject property at 1810 Madison (listed as "West High School") was listed in the database search by EDR as a non-generator of hazardous waste. Because the facility did not generate hazardous waste, this listing does not pose a REC to the subject property.
- Twenty eight sites were identified within the ASTM-recommended search distance from the subject property. Of these sites, all 28 were determined either hydrologically downgradient or crossgradient of the subject property, or classified in a regulatory status such that hazardous substance or petroleum product from these sites would not likely impact the subject property. Table 1 summarizes these 28 sites, none of which poses a REC to the subject property. Additional information is provided for one of the sites, the West Side Library brownfields.

- The West Side Library site is located directly across W. 20th Street from the subject property. According to the Phase I ESA commissioned by KCMO and conducted for its construction, the site of the library was formerly a building used to clean and spot-paint cars in preparation for sales at another location, and a lot used to park cars (Tetra Tech 2008). The Phase I ESA did not find any RECs to the West Side Library site. The West Side Library site does not pose a REC to the subject property.
- Twenty orphan sites (or non-geocoded sites) were listed as within Jackson County or the Kansas City area. According to a street map, on-line mapping resources, and information obtained during the site reconnaissance, all of the facilities were identified outside of the appropriate ASTM-recommended search distances from the subject property or were downgradient of the subject property.

TABLE 1
SITES NOT POSING RECS TO THE SUBJECT PROPERTY

Site Name	Database	Distance (miles)/ Direction	Justification
West Side Library	Brownfields	0.134/SSW	Downgradient
Dave Damon Property	VCP	0.153/N	Certified complete in 1996
Kantex Corporation	FINDS, CERCLIS- NFRAP, RCRA-Non	0.160/NNW	Crossgradient; NFRAP status, removal completed in 1994, archived in 1999; RCRA nongenerator
Joseph Mangiaracina	RCRA-Non	0.184/NNE	Across drainage divide, groundwater would be expected to flow southeast, away from the subject property; RCRA nongenerator
Holly Street Drum Site	CERCLIS-NFRAP	0.188/WNW	Across drainage divide, groundwater would be expected to flow south of the subject property; NFRAP status, removal in 1984, archived 2002
Testing Laboratory Inc.	RCRA-Non	0.230/NNE	Across drainage divide, groundwater would be expected to flow southeast, away from the subject property; RCRA nongenerator
Quality Hills Cleaners	RCRA-SQG, Drycleaners	0.234/NE	Across drainage divide, groundwater would be expected to flow southeast, away from the subject property; RCRA SQG; inspected in 2007 with no violations
Electrosatic Equipment Co Inc	RCRA-Non	0.236/NNW	Crossgradient; RCRA nongenerator

TABLE 1 (Continued)

6.1.2 Valuation Reduction for Environmental Issues

No Further Action certification from Missouri

START reviewed an estimate of the current market value of the subject property (Tetra Tech 2008). This market value report explicitly stated that the estimate did not include any assessment of potential valuation reduction for environmental issues associated with the subject property. START has not reviewed any other information regarding potential valuation reduction associated with any known or suspected environmental conditions associated with the subject property. MBC and KCMSD were unaware of any information regarding environmental liens or activity use limitations for the subject property, and no indications of environmental liens or activity and use limitation were noted in the title information.

6.1.3 Local Jurisdiction Record

The subject property currently is zoned as R4, that is, as a residential-low apartment district (Tetra Tech 2008).

6.1.4 Engineering and Institutional Controls

As part of the environmental records search performed by EDR, federal and state databases for institutional and engineering controls were searched, including EPA's Engineering Controls Sites List and Sites with Institutional Controls, the Navy's Land Use Control Information System, and Missouri's Department of Natural Resources AUL – Sites with Controls. No institutional or engineering controls were reported (EDR 2009).

6.1.5 Title Records

Current title information for the subject property was included in a previous Phase I ESA conducted on the subject property. The title information was reviewed, and no RECs were identified (see Appendix B).

6.2 DEVIATIONS

Deviations from the ASTM E 1527-05 standard are listed in Section 1.4.

6.3 HISTORICAL USE INFORMATION FOR THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

Historical data regarding the subject property and surrounding area were gathered to determine past uses and evaluate visible environmental issues that may pose RECs. The following sections describe the aerial photographs, Sanborn® maps, topographic maps, city directories, and past environmental reports that were available for the subject property. Historical use documentation referenced in the following sections is included as Appendix C.

6.3.1 Aerial Photographs

START reviewed aerial photographs of the subject property and surrounding area for the years 1940, 1952, 1955, 1957, 1963, 1970, 1976, 1979, 1983, 1991, 1996, 2003, and 2007 (Tetra Tech 2008). Table 2 presents a summary of information obtained from the aerial photographs.

TABLE 2 SUMMARY OF AERIAL PHOTOGRAPHS

YEAR	COMMENTS
	Subject Property: The subject property appears to be in its current configuration as a school. The West High Complex consists of three structures. The West High Annex property is an open field.
1940, 1952	Surrounding Area : The surrounding property consists of single-family homes and small apartment buildings. Railyards are visible in the Kansas River bottoms, approximately 0.25 mile northwest of the subject property. A low structure, which appears to be a commercial property, is visible at the intersection of W. 20 th Street and West Pennway. A small lake is visible approximately 0.25 mile southwest of the subject property.
1955	Subject Property: The fourth, southernmost structure has been constructed at the West High Complex.
1733	Surrounding Area : No changes appear to the area immediately surrounding the subject property. The small lake southwest of the subject property has been filled in.
1957	Subject Property: No changes appear to the West High Complex property. Ground clearing has begun at the West High Annex property.
	Surrounding Area: No changes appear to the area immediately surrounding the subject property.
1963, 1970, 1976, 1979,	Subject Property: The West High Annex building has been constructed. No changes appear to the West High Complex property.
1983	Surrounding Area : The single-family and small-apartment residential area southwest of West Pennway has been replaced with multi-family apartment buildings.
1991	Subject Property: Two outbuildings are visible west of the West High Annex building. No changes appear to the West High Complex property.
	Surrounding Area: No changes appear to the area immediately surrounding the subject property.
1996	Subject Property: No changes appear to the subject property.
	Surrounding Area: The multi-family apartment buildings have been removed.
	Subject Property: No changes appear to the subject property.
2003, 2007	Surrounding Area : The area previously occupied by multi-family apartment buildings has been developed into single-family homes and townhouses. The low commercial building south of the West High Annex has been demolished.

The review of the aerial photographs did not identify any past uses that would pose RECs to the subject property.

6.3.2 Sanborn® Map Report

START reviewed Sanborn[®] fire insurance maps of the subject property and the area surrounding the subject property for the years 1895 and 1909 (Tetra Tech 2008).

The Sanborn® fire insurance map from 1895 shows the oldest building on the West High Complex listed as Switzer School. This building does not include the current northernmost or two southernmost

structures at the West High Complex. A wood-frame annex building (no longer present) is visible north of the original West High Complex structure. According to the map, the West High Complex building was heated by a boiler. The surrounding area is low-density residential development. A metropolitan railroad car barn is visible at W. 17th and Madison Avenue, approximately 0.125 mile north of the subject property. The car barn is at a higher elevation, but crossgradient of the subject property. The waterworks reservoir is visible 0.25 mile southwest of the subject property at W. 21st and Jarboe Street (then W. Prospect). The reservoir is the small lake identified in the aerial photographs.

The 1909 Sanborn® fire insurance map shows the second structure constructed in the West High Complex, south of the original structure. The two buildings are not connected by any aboveground structures, but both buildings are heated by boilers located in the newer building. All surrounding structures are residences.

No RECs were identified from review of the Sanborn® fire insurance maps.

6.3.3 Historical Topographic Maps

Topographic maps can be used as indicators of land use and structural changes on the subject property, and thus can help determine historical land use that might pose an environmental issue to the subject property. START reviewed USGS Kansas City, Missouri quadrangle topographic maps of the subject property and surrounding area for the years 1940, 1957, 1964, and 1970 (Tetra Tech 2008). Table 3 presents a summary of information obtained from the historical topographic maps.

TABLE 3
SUMMARY OF HISTORICAL TOPOGRAPHIC MAPS

YEAR	COMMENTS
	Subject Property: The subject property is identified as Junior High School.
1940	Surrounding Area : Other schools and highways are shown in the surrounding areas. The reservoir is visible 0.25 mile southwest of the subject property. Rail lines are visible approximately 0.25 mile northwest of the subject property, in the Kansas River bottoms.
1957, 1964, 1970	Subject Property: The subject property is identified as West Junior High School. Surrounding Area: Other schools and highways are shown in the surrounding areas. The reservoir has been filled in.

The review of the topographic maps did not identify any past uses that would pose RECs to the subject property.

6.3.4 City Directories

START reviewed city directories for Madison Avenue, Summit Street, W. 18th Street, and W. 20th Street from 1924, 1934, 1939, 1959, 1968, 1974, 1977, 1981, 1986, 1989, 1992, 1997, and 2000 (Tetra Tech 2008). Directories from 1929 were also provided for Madison Avenue and Summit Street.

The subject property was identified in city directories for Madison and Summit Street in each of the city directories under a variety of names and a variety of addresses. Except for the following properties, all properties immediately surrounding and upgradient of the subject property were residential.

- The Cabot Westside Health Clinic (Cabot Clinic) was identified in all directories from 1924 to 2000 at 721 W. 18th Street, 1820 Summit Street, or 1800 Summit Street. The Cabot Westside Health Clinic relocated to 2121 Summit Street in 2004 (Tetra Tech 2008). That address now is occupied by an acupuncturist office. Neither the Cabot Clinic nor the acupuncturist poses a REC to the subject property.
- The excavated area south of the West High Annex was identified in 1924 as a furniture repair shop (904 W. 20th Street); in 1934 as a warehouse for unspecified goods (900 W. 20th Street); and from 1968 to 1992 as Edcor Safety Equipment Company (Edcor) (900 W. 20th Street). The property was listed as vacant in 1939 and not listed in 1959, 1997, and 2000. According to KCMO records, the building was demolished in 2003 ((Tetra Tech 2008). According to a Phase I ESA commissioned by KCMO and conducted for the construction of the West Side Library, Edcor was a distributor for protective equipment such as shoes, clothing, and helmets. The building was also used as storage space for the business (Tetra Tech 2008). None of the demolition permits indicated an environmental issue with the building. An interview with the key site manager revealed that when the former Edcor Safety Equipment building was demolished, the building debris was left below grade. Hazardous materials such as asbestos and lead, which are commonly associated with building materials, could be present below grade.
- The property formerly at 1837 Madison Avenue, now incorporated into the West High Complex property, was identified as a lamp manufacturer in 1924 and as a broom manufacturer in 1929 and 1934. Because the broom manufacturing was administered by the Kansas City Association for the Blind, it is unlikely that hazardous materials were in use during the period from 1929 to 1934. The lamp manufacturer may have generated plating waste or spent solvents. However, any surface soil contaminated by activities at the lamp manufacturer likely was removed during excavation of the basement and subbasement for the West High Complex building. The historical broom and lamp manufacturing at 1837 Madison does not pose a REC to the subject property.

6.3.5 Previous Reports

A previous Phase I ESA report prepared by Tetra Tech, dated October 13, 2008, was provided by the KCMSD and reviewed for the completion of this report. A copy of this report is included in Appendix B.

7.0 FINDINGS

Three significant findings were identified from review of the environmental database review, site reconnaissance, or interviews:

- Due to the age of the subject property, ASTs for heating fuel oil were likely installed during West High Complex's history. However, no visual evidence of past or present onsite ASTs or USTs—for example, pipes, pumps, or stains—was apparent during the site reconnaissance. Moreover, much of the concrete basement floor was stained from standing water and mold growth, and, given the elapsed time since the tank was likely removed from the basement, any staining that may have resulted from a release may no longer be visible. In addition, evidence of historic coal usage was observed. Given the age of the building, it is likely that the boilers were converted from coal to fuel oil before their ultimate conversion to natural gas. Because of the inability to locate documentation of any tank removal and any associated cleanup or removal activity, a release from a former fuel oil storage tank cannot be precluded.
- According to a previous Phase I ESA conducted on the subject property, the lot was graded with unknown fill during its construction between 1889 and 1955 (Tetra Tech 2008).
- All rooms in the West High Complex and West High Annex buildings were visually assessed for the presence of LBP, ACBM, and mold-impacted materials. Visual assessments found suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth in multiple areas. In addition to the hazardous materials listed above, PCBs may be present in caulking associated with windows, doors and masonry columns. Based on recent EPA guidance, caulking containing PCBs is a concern in buildings constructed or renovated between 1950 and 1978.

8.0 OPINIONS

The START EP has determined that the inquiry has identified conditions indicative of releases or threatened releases of petroleum products or hazardous substances. Three RECs to the subject property were identified from review of historic records, review of environmental databases, site reconnaissance, or interviews—as described in Section 8:

- Probable previous storage of fuel oil and presence of an AST or UST pose a REC to the subject property.
- According to a previous Phase I ESA conducted on the subject property, the lot was graded with unknown fill during its construction between 1889 and 1955. The age and unknown origin of this fill material pose a REC to the subject property.
- The presence of suspected LBP in poor condition, suspected ACBM in severely damaged condition, visible heavy mold growth and possible PCBs in door, window and masonry columns poses a REC to the subject property.

9.0 CONCLUSION AND RECOMMENDATIONS

START has performed a Phase I ESA in conformance with the USEPA Task Order No. 0163 SOW for a TBA and limitations of ASTM E 1527-05 for the subject property at 1810 and 1829 Madison Avenue, Kansas City, Jackson County, Missouri. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This determination is based on site reconnaissance and interviews with EPA personnel.

START offers the following recommendations:

- A limited Phase II ESA TBA at the subject property to verify the presence or absence of (1) any fuel tanks or areas impacted by releases from such tanks, or (2) contamination associated with unidentified fill materials, at the subject property.
- A full survey for LBP, ACBM, PCBs (in caulking), and mold-impacted materials, including sampling to definitively identify any suspected hazardous materials and to determine the genus and species of observed mold growths. The full survey will be submitted to the EPA in a separate report.

10.0 CERTIFICATION STATEMENT

The resume of the environmental assessor who conducted the site reconnaissance and prepared the report, and the resume of the environmental professional who oversaw completion of this work, are provided in Appendix D. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10 of this part. We have the specific qualifications based on education, training, and experience to assess a subject property of the nature, history, and setting of the subject property. We have developed and performed the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312, and attest to the completeness and accuracy of the information contained in this report.

We appreciate the opportunity to work with you on this project. If you have any questions concerning the findings and conclusions contained in this report, please call Project Manager Jeffrey Mitchell at (816) 412-1773 or the environmental professional performing this assessment, Ms. Rachel Norton at (816) 412-1783.

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was conducted by Tetra Tech, Inc., (Tetra Tech) for the School District of Kansas City, Missouri (KCMSD), in accordance with the Standard Practice for Environmental Site Assessments: Phase I ESA Process, ASTM International (ASTM) designation E 1527-05 (ASTM 2005); the September 10, 2008, Scope of Work (SOW); and otherwise in compliance with the U.S. Environmental Protection Agency's (EPA) "All Appropriate Inquiries" Rule ("AAI Rule") (40 *Code of Federal Regulations* [CFR] Part 312) for the subject property located at 1810 and 1829 Madison Avenue, Kansas City, Jackson County, Missouri.

KCMSD is in the process of selling the subject property, site of the former Switzer Complex and Switzer Annex. The Switzer Complex and Switzer Annex are two unused school buildings surrounded by high-density residential and commercial development. The subject property is the Switzer Annex area and the Switzer Complex area, which are contiguous properties opposite each other across Madison Avenue. The Switzer Annex area is an approximately 2.4-acre area and the Switzer Complex area is an approximately 2.24-acre area. The subject property is roughly bounded by W. 18th Street on the north, Summit Street on the east, W. 20th Street on the south, and Belleview Avenue and West Pennway on the west. The subject property is owned by School District of Kansas City, Missouri, Building Corporation, a not-for-profit corporation. A school operated on portions of the subject property from 1889 to 2005. Mr. Gil Mont is considered the key site manager for the subject property.

The subject property currently includes two unused school buildings, their outbuildings, and grounds, surrounded by high-density residential and commercial development. The grounds include playgrounds and parking areas. The grounds south of the building include, from north to south, a brick-paved area, a circular drive, and an asphalt playground within the circular drive.

This assessment has revealed evidence of one recognized environmental condition (REC) in connection with the subject property based on available information. Fuel oil likely was stored in at least one aboveground storage tank (AST) or underground storage tank (UST) in the Switzer Complex building. Any tank has since been removed. The condition of the floor in the basement, which had standing water and mold growth, prevented any assessment of staining or possible release. Tetra Tech was unable to obtain any documentation related to the removal or closure of an AST or UST. Given the amount of time that has passed since any tank has been removed and lack of information obtained regarding closure, a release from a former tank cannot be precluded. The probable storage of fuel oil and the presence of an AST or UST poses a REC to the subject property.

In addition to the REC related to the former AST and UST, Tetra Tech identified an additional environmental concern. All rooms in the Switzer buildings were visually assessed for the presence of lead-based paint (LBP), asbestos-containing building materials (ACBM), and mold-impacted materials. Visual assessments found suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth in areas throughout the Switzer building. The presence of suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth pose an environmental concern for the subject property.

Tetra Tech offers the following recommendations:

- Tetra Tech recommends a further search for documentation related to the removal of any ASTs or USTs from the Switzer Complex building. If documentation cannot be located or if documentation cannot preclude a release from any AST or UST, Tetra Tech recommends limited sub-slab sampling for fuel-oil range petroleum hydrocarbons in the areas around basement floor drains.
- Tetra Tech recommends a full survey for LBP, ACBM, and mold-impacted materials, including sampling to definitively identify any suspected hazardous materials and to determine the genus and species of observed mold growths.

SECTION 1
INTRODUCTION

On September 10, 2008, Tetra Tech, Inc., (Tetra Tech) was authorized by Ms. Cheri Medina, Associate Superintendent of Operations of the School District of Kansas City, Missouri, (KCMSD) to conduct a Phase I Environmental Site Assessment (ESA) of the Switzer Annex and Switzer Complex (Switzer) property. KCMSD also requested a visual assessment of the presence of potential hazardous materials at the Switzer property—in particular, lead-based paint (LBP), asbestos-containing building material (ACBM), and mold-impacted materials. The approximately 4.6-acre Switzer property, herein referred to as the "subject property," is at 1810 and 1829 Madison Avenue, Kansas City, Missouri (see Figure 1 and Figure 2, Appendix A). The subject property consists of two unused school buildings surrounded by high-density residential and commercial development.

1.1 PURPOSE

The goal of this ESA is to identify recognized environment conditions (REC) associated with the subject property. As defined by ASTM, RECs are the presence or likely presence of any hazardous substances or petroleum products on a subject property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the subject property or into the ground, groundwater, or surface water of the subject property. The term includes hazardous substances or petroleum products, even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies (Section 1.1.1 E 1527-05, ASTM 2005). Historical recognized environmental conditions (HREC) are environmental conditions that in the past would have been considered RECs, but that may or may not be considered RECs currently (Section 3.2.39 E 1527-05, ASTM 2005).

This ESA is intended to satisfy one of the requirements for the innocent landowner defense, the contiguous property exemption, and the bona fide prospective purchaser exemption to Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the subject property consistent with good customary practice," as defined in 42 U.S. Code Section 9601 (35)(B).

In addition to identifying RECs associated with the subject property, this report is also designed to identify the presence of potential hazardous materials at the subject property—in particular, LBP, ACBM,

and mold-impacted materials. This assessment is based on visual observation only. No samples of potential hazardous materials were collected or analyzed as part of this ESA.

1.2 SCOPE OF WORK

The scope of work (SOW), based on ASTM E 1527-05 Environmental Site Assessments: Phase I

Environmental Site Assessment Process, and the SOW attached to the contract approved by Ms. Medina

on September 10, 2008, is to identify RECs to the subject property and to visually assess for possible

presence of potential hazardous materials (i.e., LBP, ACBM, and mold-impacted materials) at the subject

property. Phase I ESAs typically are conducted in a four-phase process, including: records review; site

reconnaissance; interviews with current owners and occupants of the subject property, and local

government agencies; and preparation of a report. Section 11 lists sources referenced during this

investigation.

Any items listed in the ASTM standard that the report does not specifically identify as present can be

assumed not present within the subject property or within such distance to the subject property as to be of

potential concern to the subject property. Any item mentioned but not specifically identified as a REC

can be assumed not a REC to the subject property.

1.3 SIGNIFICANT ASSUMPTIONS

The following are beyond the scope of this evaluation: sampling and analysis for radon in indoor air and

for lead in water, soil, and groundwater; evaluations of indoor and/or outdoor air quality, regulatory

compliance, industrial hygiene, and noise impacts; and identification of geological or geotechnical

hazards.

1.4 **DEVIATIONS**

Deletions or deviations from ASTM E 1527-05 are as follows. For each deviation noted, the Tetra Tech

Environmental Professional (EP) has conducted an analysis of the data gaps or failures, and impacts of

these on Tetra Tech's ability to render an opinion regarding conditions indicative of releases or threatened

releases of petroleum products or hazardous substances.

No historical records were available for the period from 1889, year of the initial property transfer, to 1924. Beginning in 1924, the year of the earliest available

historical record, a time gap of more than 5 years was noted in available historical information between 1940 and 1952. Based on the consistent, observed use of the subject property in all reviewed historical information, the presence of time gaps does

not impact Tetra Tech's ability to render an opinion regarding RECs.

Tetra Tech, Inc.

• Because of the age of the property, interviews with previous land owners, operators, or occupants were not possible. The key site manager has been the facilities manager for 3 years and the employee of longest standing in his department has worked for KCMSD for approximately 10 years. Tetra Tech was not provided access to or contact information for any previous facilities managers. The EP believes that information likely to be obtained from past owners, operators, or occupants of the subject property likely would not be additional to that obtained from other resources.

1.5 LIMITATIONS AND EXCEPTIONS

This report was compiled based partially on information supplied to Tetra Tech from outside sources and other information in the public domain. The conclusions and opinions herein are based on the information Tetra Tech obtained in compiling the report. This information is on file at Tetra Tech's office in Kansas City, Missouri. Tetra Tech makes no warranty as to the accuracy of statements made by others which may be contained in the report, nor are any other warranties or guarantees, expressed or implied, included or intended by the report except that it has been prepared in accordance with the current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing the same or similar services. Because the facts forming the basis for the report are subject to professional interpretation, differing conclusions could be reached. Tetra Tech does not assume responsibility for the discovery and elimination of hazards that could possibly cause accidents, injuries, or damage. Compliance with submitted recommendations or suggestions does not assure elimination of hazards or the fulfillment of client's obligations under local, state, or federal laws or any modifications or changes to such laws. None of the work performed hereunder shall constitute or be represented as a legal opinion of any kind or nature, but shall be a representation of findings of fact from records examined.

1.6 SPECIAL TERMS AND CONDITIONS

The terms and conditions set forth in Tetra Tech's contract with KCMSD shall govern this engagement.

1.7 STATEMENT OF USER RELIANCE

Representatives of KCMSD and their representatives at Block and Co. (Block) are the only parties that have been involved in shaping the scope of services needed to satisfactorily manage risks from their points of view; therefore, KCMSD and Block, any subsidiaries, affiliates, and any lender of these aforementioned parties with respect to the subject property, are considered beneficiaries of this report. Reliance on this report by parties other than these may result in reliance on assumptions whose extent and nature could distort the meaning and impact of the estimates given in this report. This could result in misinterpretation of these estimates and unwise actions based on those misinterpretations. As such, no

The presentation of this information does not bind Tetra Tech EMI to any professional reliance by a reader or recipient other than the report beneficiaries.

parties except KCMSD and Block, any subsidiaries, affiliates, and any lender of these aforementioned

parties with respect to the subject property, should rely upon estimated potential of hazardous materials at

the subject property. With the consent of KCMSD and Block, Tetra Tech is available to work with other

parties in developing probability estimates, given other parties' unique risk management concerns.

1.8 STATEMENT OF QUALIFICATIONS

Tetra Tech is a leading provider of specialized management consulting and technical services in three

principal business areas: resource management, infrastructure, and communications. The Company's

clients include a diverse base of public and private sector organizations serviced through more than

150 offices located in the United States and internationally.

Tetra Tech's Kansas City, Missouri, office has a staff of approximately 55 environmental professionals.

The Company's technical staff has demonstrated competence and ability in preparing environmental

assessments through long-term working relationships with local commercial firms and government

agencies.

Tetra Tech has conducted environmental assessments at a wide variety of properties including industrial,

manufacturing, commercial, and residential sites. Tetra Tech has performed Phase I ESAs for banks,

private developers, county and city agencies, and commercial firms.

Tetra Tech personnel are well trained and have extensive experience acquiring and interpreting collected

data. Data gathering efforts focus on historical aspects of site activities that would contribute to spills,

leaks, or disposal of hazardous materials and petroleum products. Identifying contaminant issues that

could impede development of the site, through either high costs or remedial actions, is a goal of data

gathering and interpretation. Tetra Tech also identifies potential sources of contamination in the areas

adjacent to the site, such as leaking underground storage tanks (LUST) that could impact the site, and

therefore become a REC.

Tetra Tech. Inc.

415 Oak Street

SECTION 2 SITE DESCRIPTION

This section provides a brief description of the subject property and the physical setting based on information obtained from KCMSD and a records review prior to the site reconnaissance. Observations during the site reconnaissance regarding current land use of the subject property and adjoining facilities are described in Section 4. Site Reconnaissance.

2.1 SUBJECT PROPERTY LOCATION AND LEGAL DESCRIPTION

The subject property is currently two unused school buildings surrounded by high-density residential and commercial development (see Figure 1, Appendix A). The title for the parent parcel is vested in the School District of Kansas City, Missouri, Building Corporation, a not-for-profit corporation (Tracts I and II, which contain the main Switzer buildings) and KCMSD (Tracts III through XIV). The approximate latitude and longitude of the subject property are 39° 5' 24.5'' north and 94° 35' 39.4'' west, respectively. The legal description of the Switzer Annex area is:

All of Lot 170, and all of Lots 185 through 192, inclusive, Block 7, except those parts in streets, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, together with the vacated alley adjoining said Lots, plus Lots 165 through 169, inclusive, Block 7, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, plus Lots 171 through 174, inclusive, Block 7, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri

The legal description of the Switzer Complex area is:

The South 13 feet of 1ot 201, and Lots 202 through 212, Block 8, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, together with the vacated alley adjoining said Lots, and also together with Lots 213 through 217 and the South 10 feet of Lot 218, Block 8, Jarboe's Addition, a subdivision in Kansas City, Jackson County, Missouri, together with the vacated alley East of and adjoining said Lots

The description of the parent parcel is included in Exhibit A of Appendix B.

The subject property is the Switzer Annex area and the Switzer Complex area, which are contiguous properties opposite each other across Madison Avenue (see Figure 1 and Figure 2, Appendix A). The Switzer Annex area is an approximately 2.4-acre area bounded by W. 18th Street on the north, Madison Avenue on the east, Lots 175 through 178 of Block 7 (an excavated area) on the south, and Belleview Avenue and West Pennway on the west. The Switzer Complex area is an approximately 2.24-acre area bounded by Lots 219 and 201 of Block 8 on the north, Summit Street on the east, W. 20th Street on the south, and Madison Avenue on the west.

2.2 SITE AND VICINITY GENERAL CHARACTERISTICS

The subject property includes two unused school buildings, their outbuildings, and grounds, surrounded

by high-density residential and commercial development, within 0.25 mile of the subject property.

2.3 CURRENT AND PAST USES OF THE SUBJECT PROPERTY

The subject property includes two unused school buildings, their outbuildings, and grounds. Property

valuation records reviewed show the Switzer Complex property was transferred for construction of a

school as early as 1889 and was used until 2006, and the Switzer Annex property was transferred for

construction as early as 1955 and used until at least 2000 (Bliss-Dibble Joint Venture [Bliss-Dibble]

2008a, 2008b).

2.4 DESCRIPTIONS OF STRUCTURES, ROADS, OTHER IMPROVEMENTS ON THE

SITE

The Switzer Complex portion of the subject property was a public school or educational facility from as

early as 1889 until 2006. The Switzer Annex portion of the subject property was a public school from as

early as 1955 until at least 2000. The subject property currently is two unused school buildings, their

outbuildings, and grounds. The Switzer Annex and Switzer Complex buildings are connected by a tunnel

under Madison Avenue.

The Switzer Annex building consists of two occupied floors, and an attic, and a basement below grade,

with a total building area of 27,260 square feet (Bliss-Dibble 2008a). The grounds north, west, and south

of the building are an asphalt playground, with a portable outbuilding west of the main building.

The Switzer Complex building consists of four occupied floors, an attic, a basement, and subbasement,

with a total building area of 111,042 square feet (Bliss-Dibble 2008b). The original structure was

constructed in 1889. Three additional structures were added to the original building between 1889 and

1909, between 1909 and 1940, and between 1952 and 1955 (see Section 6.3 for additional discussion).

All four buildings are connected by interior hallways and by basement and subbasement structures. The

grounds south and east of the building are asphalt parking areas.

2.5 CURRENT AND PAST USES OF ADJOINING/SURROUNDING PROPERTIES

The area surrounding the subject property is high-density residential and commercial development.

Aerial photographs, fire insurance maps, and other records reviewed (see Appendix C), show that this

land use has remained consistent since at least 1895.

Tetra Tech, Inc. 415 Oak Street Kansas City, Missouri 64106 8 Switzer Complex and Annex, Phase I Environmental Site Assessment 1810 and 1829 Madison Avenue

Kansas City, Missouri 103S0684.02

GEOLOGIC, HYDROGEOLOGIC, HYDROLOGIC, AND TOPOGRAPHIC 2.6 CONDITIONS

The following sections describe the environmental setting of the subject property and surrounding area.

2.6.1 **Topography**

The subject property is depicted on the United States Geological Survey (USGS) Kansas City, Missouri

Topographic Quadrangle Map 7.5-minute series (USGS 1996). The subject property is approximately

845 feet above mean sea level (msl) at its lowest point at the southwestern corner of the subject property

and about 910 feet above msl at its highest point on the northeastern corner of the subject property. The

overall topographic gradient slopes southwest. Based on site reconnaissance conducted by Tetra Tech

personnel on October 2, 2008, the subject property drains into storm sewers on the southwest corner of

the subject property.

2.6.2 **Geologic Setting**

The subject property is located in Jackson County in western Missouri. According to the Center for

Applied Research and Environmental Systems (CARES), the bedrock geology at the subject property is

the Kansas City Group of the Missourian series of the Pennsylvanian system (CARES 2008). The Kansas

City Group consists of interbedded sandstones, limestones, and shales. The bedrock at the subject

property is topped by a clayey-silt and silty-clay decomposition residuum (CARES 2008).

Soils on the subject property have been mapped as upland Urban Land, with slopes of 9 to 14 percent

(United States Department of Agriculture 1984). The complex consists of strongly sloping areas where

more than 85 percent of the surface is covered by asphalt, concrete, buildings, or other impervious

material.

2.6.3 Hydrogeology

Based on information obtained from the USGS Groundwater Atlas of the United States (USGS 1997), the

subject property is in an area in which the most important aquifer system is the surficial aquifer, an

unconfined aquifer found in stream-valley sands and gravels. Recharge to the stream-valley aquifer is by

infiltration of precipitation, seepage of water from the Missouri River to the aquifer during periods of

high streamflow, and inflow from bedrock aquifers. Discharge from the aquifer is by evapotranspiration,

withdrawals by wells, and seepage to the Missouri River during periods of low streamflow. The general

direction of water movement in the stream-valley aquifer is downstream and toward the stream.

The EDR database search found 42 registered USGS wells, and no registered state or public water supply wells, within a 1-mile radius of the subject property (EDR 2008). All but four of the USGS wells are in the Kansas River bottoms, at elevations approximately 100 feet below the subject property. None of the four wells at elevations comparable to that of the subject property had recorded water level measurements. Given the lack of reported static water levels for wells, no definitive, site-specific groundwater flow information could be determined. Based on a review of topographic maps, the regional topographic gradient in the area of the subject property is toward the west and northwest. In the absence of site-specific data or other indicators, the direction of shallow groundwater flow can be inferred from the regional topographic slope and is, therefore, inferred to the west and northwest. Definitive groundwater flow can be accurately determined only through collection of site-specific groundwater elevation data.

2.6.4 Hydrology

Surface water in the site vicinity appears to follow surface topography and either infiltrates the ground or flows south and southwest toward the Kansas River.

SECTION 3 USER-PROVIDED INFORMATION

The following section summarizes information (if any) provided by KCMSD with regard to the ESA.

Copies of user-provided information referenced in the following sections are included as Appendix B.

3.1 SUMMARY OF TITLE INFORMATION

KCMSD provided information related to the title for the subject property. A copy of this information is

in Appendix B. No RECs were indicated from a review of this information.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

KCMSD was not aware of any information regarding subject property environmental liens or activity and

use limitations, and no indications of environmental liens or activity and use limitations were noted in the

title information provided by KCMSD.

3.3 SPECIALIZED KNOWLEDGE

KCMSD provided the most recent Asbestos Hazard Emergency Response Act (AHERA) triennial report

for the subject property, dated April 2001. The triennial report confirmed the presence of damaged and

significantly damaged ACBM in the school building on the subject property. Damaged ACBM in the

school building does pose an environmental concern for the subject property. Section 4.4 provides

additional information about ACBM at the subject property. The AHERA report is not included as an

attachment, but can be requested through the KCMSD legal department.

3.4 OWNER, SUBJECT PROPERTY MANAGER, AND OCCUPANT INFORMATION

According to information provided by KCMSD, the subject property is owned by School District of

Kansas City, Missouri, Building Corporation, a not-for-profit corporation. Mr. Gil Mont is the facilities

manager with oversight of the Switzer property and is considered the key site manager for the subject

property.

3.5 REASON FOR PERFORMING PHASE I ESA

According to KCMSD, this Phase I ESA was requested to support the proposed sale of the Switzer Annex

and Switzer Complex properties.

Tetra Tech, Inc.

415 Oak Street

The presentation of this information does not bind Tetra Tech EMI to any professional reliance by a reader or recipient other than the report beneficiaries.

SECTION 4 SITE RECONNAISSANCE

The Phase I ESA site reconnaissance was conducted on October 2, 2008, by Ms. Heather Wood, Tetra

Tech Environmental Professional. The visual hazardous materials assessment was conducted on

October 2 and 3, 2008, by Mr. Jeffrey Mitchell, Ms. Rachel Treanor, and Ms. Michelle Nicholson. All

are AHERA-certified asbestos inspectors, and Mr. Mitchell and Ms. Treanor are both Missouri-certified

lead inspectors. Resumes for Ms. Wood, Mr. Mitchell, Ms. Treanor, and Ms. Nicholson are included as

Appendix D.

4.1 METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance consisted of a visual inspection of the subject property in accordance with the

requirements set forth in 40 Code of Federal Regulations (CFR) Part 312, and observations of the

perimeter area of the subject property to determine the presence of objects of environmental concern.

Access was available to all areas of the subject property.

Photographic documentation of the site reconnaissance is in Appendix E.

4.2 **GENERAL SITE SETTING**

The following sections describe the subject property's current and past use and exterior and interior

features.

4.2.1 **Site Description**

The subject property is at 1810 and 1829 Madison Avenue, Kansas City, Jackson County, Missouri. The

subject property includes two unused school buildings, their outbuildings, and grounds, surrounded by

high-density residential and commercial. .

4.2.2 **Current and Past Site Use**

Property valuation records reviewed show the Switzer Complex property was transferred for construction

of a school as early as 1889 and was used until 2006, and the Switzer Annex property was transferred for

construction as early as 1955 and used until at least 2000. The subject property currently is unused.

4.2.3 Exterior Observations

The Switzer Complex building consists of four structures connected by interior hallways and by basement

and subbasement structures. The grounds south and east of the building are asphalt parking areas

(Photographs 1 through 7, Appendix E). The Switzer Annex building is surrounded on all sides by an

asphalt playground, with a portable outbuilding west of the main building (Photographs 8 through 11,

Appendix E). The subject property is surrounded on all sides by commercial and high-density residential

development (see Photographs 12 through 18, Appendix E).

4.2.4 Interior Observations

Access to interior areas of the Switzer buildings was during the site reconnaissance of October 2 and 3,

2008. Interior areas of the Switzer Complex building were consistent with a school building. Corridors

provide access to individual classrooms on floors 1 and 2 of the facility. The attic was accessed form the

second floor. Concrete floors, plaster walls, drop ceilings and ceiling tiles, and some drywall were the

interior building materials observed. A significant amount of the facilities overall footprint is on the

lower levels, on the ground, basement, and gymnasium floors. A complex series of corridors, restrooms,

balconies, and storage areas are on the lower ground floor in proximity to the gymnasiums. In addition, a

former dance studio and band room are on the lower gymnasium level. A swimming pool and associated

locker and restrooms, storage, and tunnels are located on the basement level of the Switzer Complex

facility. Tunnels provide access and utility conduits from Switzer Complex to the Switzer Annex.

The Switzer Annex is a newer facility. Neither the attic nor the basement was accessible at the Switzer

Annex. Corridors provide access to individual classrooms on floors 1 and 2 of the facility. The floors are

tiled, and drop ceiling tiles were observed. A cafeteria and restrooms were observed.

4.3 SPECIFIC RECONNAISSANCE ITEMS

The following sections are related to items observed during reconnaissance.

4.3.1 Hazardous Substances and Petroleum Products

A 55-gallon plastic drum of Polar RV antifreeze was observed on the first floor of the Switzer Annex (see

Photograph 36, Appendix E). No other evidence of hazardous substances or petroleum products was

noted on the subject property.

Tetra Tech. Inc.

The presentation of this information does not bind Tetra Tech EMI to any professional reliance by a reader or recipient other than the report beneficiaries.

4.3.2 Hazardous Waste

Old computer monitors were observed in rooms throughout the facility (see Photographs 19 through 24,

Appendix E). Given the condition of the monitors and the condition of the rooms in which they were

stored, it is likely that the monitors are no longer useable and should be considered waste. Waste

computer monitors may contain regulated amounts of lead and be hazardous waste if disposed of. Waste-

like cleaning chemicals and off-specification paint also were observed in rooms throughout the facility

(see Photographs 25 through 38, Appendix E). Waste-like cleaning chemicals and off-specification paint

may be characteristically ignitable or toxic hazardous waste. Although monitors and waste-like cleaning

chemicals and paint may be hazardous waste, their presence on the subject property does not constitute a

release or material threat of release to the subject property is considered a de minimis condition.

4.3.3 Landfills, Dumps, Burials, or Solid Waste Disposal

No landfills, dumps, or evidence of burial activities was observed at the proposed lease property or

subject property. Significant amounts of waste-like educational supplies remain in the building from

when it was in use (see Photographs 39 through 45, Appendix E). Tetra Tech did not observe any

uncontrolled dumping at the property.

4.3.4 Storage Tanks

Underground Storage Tanks

No visual evidence of past or present on-site underground storage tanks (UST)—including pipes, pumps,

or stains—was apparent during the site reconnaissance.

Aboveground Storage Tanks

No visual evidence of past or present on-site aboveground storage tanks (AST)—including pipes, pumps,

or stains—was apparent during the site reconnaissance.

4.3.5 Polychlorinated Biphenyls (PCB)-containing Equipment

Utility poles on the south side of the building had four electric transformers, all of which were labeled

"non-PCB" (see Figure 2, Appendix A; Photographs 46 and 47, Appendix E). A utility pole on the north

boundary of the subject property had one pole-mounted transformer, which was not labeled non-PCB.

Tetra Tech, Inc. 415 Oak Street 14 Switzer Complex and Annex, Phase I Environmental Site Assessment 1810 and 1829 Madison Avenue Kansas City, Missouri

103S0684.02

Kansas City, Missouri 64106

The presentation of this information does not bind Tetra Tech EMI to any professional reliance by a reader or recipient other than the report beneficiaries.

Although this transformer may contain PCBs, it was all in good condition, with no evidence of leaks. The

presence of pole mounted transformers do not pose a REC to the subject property.

4.3.6 Heating, Ventilation, and Air Conditioning System and Fuel Source

The Switzer Complex building is heated by natural-gas powered boilers. Access to the boilers is from the

basement and ground floor levels. Evidence of historic coal usage was observed. A large metal hatch

door was observed in the boiler room but was not opened. Given the age of the building, it is likely that

the boilers were converted from coal to fuel oil before their ultimate conversion to natural gas.

Boilers were not observed in the Switzer Annex building. According to Mr. Mont, HVAC for the Switzer

Annex was provided by equipment in the Switzer Complex building.

4.3.7 Drains, Sumps, Pools of Liquids, Standing Water, Cisterns, and Cesspools

The Switzer Complex Building has taken on a substantial amount of water on the lower floors as

observed by the deteriorated plaster, stained building materials such as drywall and ceiling tiles, warped

wood floors, and visible mold. Drains and some standing water were observed in the basement and

throughout some hallways and classrooms on the lower ground level of the facility. The standing water

appeared to be related to windows that had been broken out on the north side on the complex. Drains and

sumps appeared to be connected to city sewer services. Sumps were not observed. No drains, pools of

liquid, standing water, cisterns, or cesspools were observed outside the building.

4.3.8 Pits, Ponds, and Lagoons

No pits, ponds, lagoons, or open pools likely to contain or to have been used in the disposal of hazardous

substance or petroleum products, or for waste disposal or waste treatment, were observed on the subject

property.

4.3.9 Stains or Corrosion and Stained Soil or Pavement

No corrosion or stained soil was observed, and no stained pavement was observed outside the building.

Stained concrete flooring was observed in the basement, in an area of standing water. Stained concrete

does not pose a REC to the subject property.

103S0684.02

Tetra Tech. Inc.

4.3.10 Areas of Dead, Distressed, Discolored, or Stained Vegetation

No areas of dead, distressed, discolored, or stained vegetation that may indicate RECs were observed on

the subject property.

4.3.11 Possible Fill, Grading, or Solid Waste Disposal

The lot was graded with unknown fill during its construction between 1889 and 1955. No solid waste

disposal was observed during the site reconnaissance.

4.3.12 Smells of Chemical Gases, Petroleum Products, or Noxious Odors

No smells of chemical gases, petroleum products, or noxious odors were noted at the time of the site

reconnaissance.

4.3.13 Wastewater and Stormwater Systems and Discharges

No wastewater systems or discharges were observed on the subject property. Stormwater runoff is

directed into street-level storm sewers.

4.3.14 Wells and Potable Water Supply

No dry, irrigation, injection, abandoned, or other wells were observed on the subject property.

4.3.15 Utilities

Electrical power is supplied to the site by Kansas City Power and Electric through overhead power lines

and five pole-mounted electric transformers (see Figure 2, Appendix A and Photographs 46 through 48).

Natural gas service is provided by Missouri Gas Energy. Water and wastewater service is provided by the

City of Kansas City, Missouri.

4.3.16 Other Site-specific Environmental Conditions

No other site-specific environmental conditions were noted during the site reconnaissance.

4.4 HAZARDOUS MATERIALS ASSESSMENT

All rooms in the Switzer Complex and Switzer Annex buildings were visually assessed for the presence

of LBP, ACBM, and mold-impacted materials. The results of that assessment are in Appendix F. Visual

assessments found suspect LBP in poor condition, suspect ACBM in damaged and severely damaged

Tetra Tech, Inc. 415 Oak Street Kansas City, Missouri 64106 16 Switzer Complex and Annex, Phase I Environmental Site Assessment 1810 and 1829 Madison Avenue condition, and visible moderate and heavy mold growth. The presence of these potentially hazardous materials poses a REC to the subject property.

This report was prepared in accordance with generally accepted industrial hygiene practice and procedures, the project Scope of Work, and the terms and conditions in the Agreement. This report does not cover or comment on structural areas not assessed. The data evaluation and assessment stated herein constitute a professional opinion; no other warranty is expressed or implied. These assessments are based on visual assessment and professional judgment only; no samples were collected. Samples of building materials must be collected and analyzed to make definitive judgments about the presence or absence of LBP, ACBM, or mold-impacted materials at the subject property or to determine the genus and species of molds at the subject property.

Tetra Tech personnel qualitatively assessed the presence and condition of LBP in the Switzer Annex and Switzer Complex buildings (see Table F-1A and Table F-1B, Appendix F). Because of the age of the building, all painted surfaces were assumed to contain LBP. LBP was determined to be in intact, fair, or poor condition. Intact condition is characterized by an intact surface and not more than 25 percent (%) damage. Fair condition is characterized by a moderately intact surface with more pronounced damage and not more than 50% damage. Poor condition is characterized by severe flaking and peeling observed and more than 50% damage. All rooms in the Switzer Annex building had no painted surfaces or paint in intact conditions. For the Switzer Complex building, of the rooms assessed, 260 had painted surfaces and were accessible for viewing. Of the 260 rooms with painted surfaces, 69 had suspect LBP that was in intact condition, 124 had LBP that was intact to fair condition or fair condition, and 67 had suspect LBP that was in fair to poor or poor condition.

Tetra Tech personnel qualitatively assessed the presence and condition of ACBM in the Switzer Annex and Switzer Complex buildings (see Table F-2A and Table F-2B, Appendix F). The presence of suspected ACBM was assessed independently by Tetra Tech personnel. However, the presence of known ACBM is confirmed by the 2001 AHERA reports. Because of the variety of materials assessed, quantitative assessments of degrees of damage were not possible. Materials were judged to be in good condition if they were without any visible damage. Materials were judged to be either damaged or severely damaged based on a qualitative assessment. For Switzer Annex, of the rooms assessed, 67 had suspected ACBM. Of the 67 rooms with suspected ACBM, none had any severely damaged suspected ACBM, 60 had some damaged suspected ACBM, and 3 had only suspected ACBM in good condition. Condition of ACBM was not recorded for the four remaining rooms (three rooms in the attic and Room 113). For Switzer Complex, of the rooms assessed, 282 had suspected ACBM. Of the 282 rooms with

 $17 \ \ Switzer\ Complex\ and\ Annex,\ Phase\ I\ Environmental\ Site\ Assessment$

suspected ACBM, 226 had some severely damaged suspected ACBM, 49 had some damaged suspected ACBM, and 4 had only suspected ACBM in good condition.

Tetra Tech personnel qualitatively assessed the presence and condition of mold-impacted materials in the Switzer Annex and Switzer Complex buildings (see Table F-3A and Table-3B, Appendix F). Mold is naturally occurring, and levels of mold vary with testing locations and with time. Assessment of mold growth in a space represents conditions only at the time the assessment occurs. The assessor determined the degree of damage that molded building materials displayed based on the ratings of light, moderate and heavy growths observed. Light growth is characterized by approximately less than 25% of the substrate affected by presumed mold growth, light water damage and minimal mold odor. Moderate growth is characterized by approximately 50% of the substrate affected by presumed mold growth, moderate water damage, and increased mold odor. Heavy growth is characterized by approximately more than 75% of the substrate affected by presumed mold growth, severe water damage, and extreme mold odor. None of the rooms in the Switzer Annex building had visible mold growth. For the Switzer Complex building, of the rooms assessed, 112 had visible mold growth or rust staining (presumed water infiltration) and were accessible for viewing. Of the 112 rooms with visible mold or rust, 27 had light growth, 4 had moderate growth, and 81 had heavy growth.

4.5 VICINITY RECONNAISSANCE

The subject property is in a high-density residential neighborhood. The areas on north, east, and west of the subject property are residential. The southern boundary of the subject property is the West Side Library, with residences, commercial properties, and a community center beyond. The southwestern corner of the subject property is bounded by a pit (see Photographs 49 and 50, Appendix E). This pit is the former location of Edcor Safety Equipment (see Section 6.3.4). Reconnaissance of the vicinity of the subject property did not reveal any RECs.

SECTION 5
INTERVIEWS

The objective of conducting interviews is to obtain information concerning RECs in connection with the subject property. This information was obtained verbally, as indicated below. Interviewees were cooperative and forthcoming with information, unless otherwise specified. Contact information for all individuals interviewed is included as Appendix G.

5.1 INTERVIEW WITH OWNER

School District of Kansas City, Missouri, Building Corporation, a not-for-profit corporation, is the subject property owner. Tetra Tech interviewed Mr. Jim Bowes, a lead project manager in the KCMSD engineering department, and Ms. Juliann Johnson, a staff attorney with the KCMSD legal department.

Tetra Tech interviewed Mr. Bowes by telephone in an attempt to determine the removal history of any fuel tanks at the subject property. Mr. Bowes said that, to the best of his knowledge, all but one fuel tank had been removed from KCMSD properties, and any fuel tank at the subject property had been removed. Mr. Bowes did not know the current location of the tank removal documentation.

Tetra Tech contacted the KCMSD legal department and spoke with Ms. Johnson in an attempt to locate tank removal documentation and to determine if the school had been the subject of any environmental legal or enforcement proceedings. Ms. Johnson was unable to locate any documentation related to removal of fuel ASTs or USTs at the subject property. Ms. Johnson was not aware of: (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property, or (3) any notices from any government entity regarding any possible environmental violations relating to hazardous substances or petroleum products.

5.2 INTERVIEW WITH KEY SITE MANAGER

Mr. Mont is the facilities manager with oversight of the Switzer property and is considered the key site manager for the subject property. Tetra Tech interviewed Mr. Mont via telephone to determine past and current uses of the subject property. Mr. Mont stated that he has been the facilities manager for 3 years. He said that the facilities manager who oversaw removal of any fuel tanks at the subject property had left the school district's employ at least 3 years earlier. Mr. Mont did not know the current location of the tank removal documentation or the approximate date on which the fuel AST was removed. Mr. Mont

Tetra Tech, Inc. 415 Oak Street Kansas City, Missouri 64106 said that neither he nor anyone in his department was aware of any releases or other environmental incidents at the subject property, and that the employee of longest standing in his department has worked for KCMSD for approximately 10 years.

5.3 INTERVIEW WITH CURRENT OCCUPANTS

The subject property is not currently occupied.

5.4 INTERVIEW WITH PAST SUBJECT PROPERTY OWNERS/OCCUPANTS

The Switzer Complex property was transferred to the control of KCMSD in 1889, and the Switzer Annex property, in 1955. No interview with past subject property owners or occupants was possible.

5.5 INTERVIEW WITH OCCUPANTS OF NEIGHBORING PROPERTIES

Surrounding properties are developed residentially. Interviews with surrounding property owners or occupants were not likely to contain material information regarding potential contamination at the subject property that would not have been identified from interviews with the property owner or key site manager.

5.6 INTERVIEW WITH LOCAL GOVERNMENT OFFICIALS

Tetra Tech contacted the City of Kansas City, Missouri (KCMO), Office of Environmental Quality (OEQ) to determine if any illegal dumping or other environmental incidents had been reported to the City. Ms. Sherri Lewis consulted OEQ records for the subject property addresses (1810 and 1820 Madison Avenue) and for nearby blocks on Madison Avenue and Summit Street. Ms. Lewis did not find any reports of environmental incidents for the subject property or for nearby blocks on Madison Avenue and Summit Street. She did have a 1982 report of inadequate building conditions for 1810 Madison Avenue (for example, leaking roof and unsanitary bathrooms). The building condition report does not pose a REC to the subject property.

On October 2, 2008, Tetra Tech contacted the City of Kansas City, KCMO Fire Department (KCFD) to determine if any hazardous materials responses at the subject property or other environmental incidents had been reported to the KCFD. To date, no response has been forthcoming. Because of other information available from KCMO and from EDR-available databases, the failure to interview representatives of KCFD does not pose a REC to the subject property.

20 Switzer Complex and Annex, Phase I Environmental Site Assessment 1810 and 1829 Madison Avenue

SECTION 6 RECORDS REVIEW

The purpose of the records review is to obtain and review records that will help identify RECs in connection with the subject property. Historical records reviewed are included in Appendix C.

6.1 ENVIRONMENTAL RECORDS SOURCES

The following sources of environmental records were accessed and reviewed as part of this assessment.

6.1.1 Environmental Database Search

Federal, state, regional, and local records were reviewed to assess whether the subject property or facilities within the approximate minimum search distance have undergone significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects. EDR performed a database search of the subject property in accordance with the ASTM E 1527-05. A copy of this report is included as Appendix H.

The databases searched have been developed and are updated by federal, state, and local agencies. While these databases are reliable and comprehensive, some out-of-date data may no longer reflect actual facility conditions. The Government Records Searched/Data Currency Tracking section of the EDR report in Appendix H identifies when each database was updated.

A review of the facilities listed within the EDR-Radius Map with GeoCheck® report was conducted (EDR 2008). The center of the radius search was outline of the subject property.

- The subject property at 1810 Madison (listed as "West High School") was listed in the database search by EDR as a non-generator of hazardous waste. Because the facility did not generate hazardous waste, this listing does not pose a REC to the subject property.
- Thirty-six sites were identified within the ASTM-recommended search distance from the subject property. Of these sites, all thirty-six were determined either hydrologically downgradient or crossgradient of the subject property, or classified in a regulatory status such that hazardous substance or petroleum product from these sites would not likely impact the subject property. These 36 sites are summarized in Table 1, none of which pose a REC to the subject property. Other than the West Side Library brownfields, the EDR sites will not be discussed further.

The West Side Library site is directly across W. 20th Street from the subject property. According to a Phase I ESA commissioned by KCMO and conducted for its construction, the site of the library was formerly a building used to clean and

- spot-paint cars in preparation for sales at another location and a lot used to park cars. The Phase I did not find any RECs to the subject property. The West Side Library property does not pose a REC to the subject property.
- Thirty orphan sites (or non-geocoded sites) were listed as within Jackson County or the Kansas City area. According to a street map, on-line mapping resources, and information obtained during the site reconnaissance, all of the facilities were identified outside of the appropriate ASTM-recommended search distances from the subject property or were downgradient.

6.1.2 Valuation Reduction for Environmental Issues

KCMSD provided an estimate of the current market value of the subject property (Bliss-Dibble 2008a, b). This market value report explicitly stated that the estimate did not include any assessment of potential valuation reduction for environmental issues associated with the subject property. KCMSD has not provided any other information regarding potential valuation reduction associated with any known or suspected environmental conditions associated with the subject property.

6.1.3 Local Jurisdiction Record

The subject property currently is zoned as R4, that is, as a residential-low apartment district (KCMO, 2008a).

6.1.4 Engineering and Institutional Controls

The subject property currently is zoned as R4 or R2a (KCMO 2008a). The northerly portion of the subject property is subject to R4 zoning (residential-low apartment district), while the predominance of the subject property is subject to R2a zoning (residential-two-family dwelling district, low density).

6.1.5 Title Records

Current title information for the subject property was supplied by KCMSD. The title information was

reviewed, and no RECs were identified (see Appendix B).

6.2 **DEVIATIONS**

No deviations were noted from the ASTM E 1527-05 required review of environmental record sources.

6.3 HISTORICAL USE INFORMATION FOR THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

Historical data regarding the subject property and surrounding area were gathered to determine past uses and evaluate visible environmental issues that may pose RECs. The following sections describe the aerial photographs, Sanborn[®] maps, topographic maps, and city directories available for the subject property. Historical use documentation referenced in the following sections is included as Appendix C.

6.3.1 Aerial Photographs

A search for historical aerial photographs was conducted by Historical Information Gatherers [HIG] (2008); aerial photographs dated 1940, 1952, 1955, 1957, 1963, 1970, 1976, 1979, 1983, 1991, 1996, 2003, and 2007 were reviewed. The review of these photographs is summarized in Table 2.

Tetra Tech, Inc. 415 Oak Street Kansas City, Missouri 64106

TABLE 2
SUMMARY OF AERIAL PHOTOGRAPHS

YEAR	COMMENTS
1940, 1952	Subject Property: The subject property appears to be in its current configuration as a school. The Switzer Complex consists of three structures. The Switzer Annex property is an open field. Surrounding Area: The surrounding property consists of single-family homes and small apartment buildings. Railyards are visible in the Kansas River bottoms, approximately 0.25 mile northwest of the subject property. A low structure, which appears to be a commercial property, is visible at the intersection of W. 20 th Street and West Pennway. A small lake is visible approximately 0.25 mile southwest of the subject property.
1955	Subject Property: The fourth, southernmost structure has been constructed at the Switzer Complex property. Surrounding Area: No changes appear to the area immediately surrounding the subject property. The small lake southwest of the subject property has been filled in.
1957	Subject Property: No changes appear to the Switzer Complex property. Ground clearing has begun at the Switzer Annex property. Surrounding Area: No changes appear to the area immediately surrounding the subject property.
1963, 1970, 1976, 1979, 1983	Subject Property: The Switzer Annex building has been constructed. No changes appear to the Switzer Complex property. Surrounding Area: The single-family and small-apartment residential area southwest of West Pennway has been replaced with multi-family apartment buildings.
1991	Subject Property: Two outbuildings are visible west of the Switzer Annex building. No changes appear to the Switzer Complex property. Surrounding Area: No changes appear to the area immediately surrounding the subject property.
1996	Subject Property: No changes appear to the subject property. Surrounding Area: The multi-family apartment buildings have been removed.
2003, 2007	Subject Property: No changes appear to the subject property. Surrounding Area: The area previously occupied by multi-family apartment buildings has been developed into single-family homes and townhouses. The low commercial building south of the Switzer Annex has been demolished.

The review of the aerial photographs did not identify any past uses that would pose RECs to the subject property.

6.3.2 Sanborn® Map Report

A search of Sanborn® maps was conducted by HIG and found maps of the subject property from 1895 and 1909 (2008).

The Sanborn map from 1895 shows the oldest building on the Switzer Complex property. This building does not include the current northernmost or two southernmost structures. A wood-frame annex building (no longer present) is visible north of the original structure. According to the map, the building was heated by a boiler. The surrounding area is low-density residential development. A metropolitan railroad car barn is visible at W. 17th and Madison Avenue, approximately 0.125 mile north of the subject property. The car barn is at a higher elevation, but crossgradient from of the subject property. The waterworks reservoir is visible 0.25 mile southwest of the subject property at W. 21st and Jarboe Street (then W. Prospect). The reservoir is the small lake identified in the aerial photographs.

The 1909 Sanborn map shows the second structure constructed in the Switzer Complex, south of the original structure. The two buildings are not connected by any aboveground structures, but both buildings are heated by boilers in the newer building. All surrounding structures are residences.

No RECs were identified from review of the Sanborn map.

6.3.3 Historical Topographic Maps

Tetra Tech reviewed 1940, 1957, 1964, and 1970 USGS Topographic Quadrangles (HIG 2008) for information regarding past uses of the subject property. The review of these topographic maps is summarized in Table 3

TABLE 3
SUMMARY OF TOPOGRAPHIC MAPS

YEAR	COMMENTS
1940	Subject Property: The subject property is identified as Junior High School. Surrounding Area: Other schools and highways are shown in the surrounding areas. The reservoir is visible 0.25 mile southwest of the subject property. Rail lines are visible approximately 0.25 mile northwest of the subject property, in the Kansas River bottoms.
1957,	Subject Property: The subject property is identified as West Junior High School.
1964,	Surrounding Area: Other schools and highways are shown in the surrounding areas.
1970	The reservoir has been filled in.

The review of the topographic maps did not identify any specific past uses that would pose RECs to the subject property.

6.3.4 City Directories

Tetra Tech reviewed city directories for Madison Avenue, Summit Street, W. 18th Street, and W. 20th Street from 1924, 1934, 1939, 1959, 1968, 1974, 1977, 1981, 1986, 1989, 1992, 1997, and 2000. Directories from 1929 were also provided for Madison Avenue and Summit Street.

The subject property was identified in city directories for Madison or Summit Street from each these years under a variety of names and a variety of addresses. With the exception of the following properties, all properties immediately surrounding and upgradient of the subject property were residential.

- The Cabot Westside Health Clinic (Cabot Clinic) was identified in all directories from 1924 to 2000 at either 721 W. 18th Street, 1820 Summit Street, or 1800 Summit Street. The Cabot Westside Health Clinic relocated to 2121 Summit Street in 2004 (St. Luke's Health System 2008). The address now is occupied by an acupuncturist office. Neither the Cabot Clinic nor the acupuncturist pose a REC to the subject property.
- The excavated area south of the Switzer Annex was identified in 1924 as a furniture repair shop (904 W. 20th Street); in 1934 as a warehouse for unspecified goods (900 W. 20th Street); and from 1968 to 1992 as Edcor Safety Equipment Company (Edcor) (900 W. 20th Street). The property was listed as vacant in 1939 and not listed in 1959, 1997, and 2000. According to KCMO records, the building was demolished in 2003 (KCMO 2008b). According to a Phase I ESA commissioned by KCMO and conducted for the construction of the West Side Library, Edcor was a distributor for protective equipment such as shoes, clothing, and helmets. The building was also used as storage space for the business (Tetra Tech 1998). None of the demolition permits had any indication that the building had an environmental issue. The Edcor property does not pose a REC to the subject property.
- The property formerly at 1837 Madison Avenue, now incorporated into the Switzer Complex property, was identified as a lamp manufacturer in 1924 and as a broom manufacturer in 1929 and 1934. Because the broom manufacturing was administered by the Kansas City Association for the Blind, it is unlikely that hazardous materials were in use during the period from 1929 to 1934. The lamp manufacturer may have generated plating waste or spent solvents. However, any surface soil contaminated by activities at the lamp manufacturer likely was removed during excavation of the basement and subbasement for the Switzer Complex building. The historical broom and lamp manufacturing at 1837 Madison does not pose a REC to the subject property.

6.3.5 Previous Reports

No previous Phase I or II environmental reports were provided by the client or identified during the interview with the subject property site manager. KCMSD provided the most recent AHERA triennial

The presentation of this information does not bind Tetra Tech EMI to any professional reliance by a reader or recipient other than the report beneficiaries. report for the subject property, dated November 2001. The triennial report identified the presence of damaged and significantly damaged ACBM in the school building on the subject property.

SECTION 7 FINDINGS

Two findings were identified from review of the environmental database review, site reconnaissance, or interviews:

• ASTs for heating fuel likely were installed during Switzer Complex's history. No visual evidence of past or present on-site ASTs or USTs—for example, pipes, pumps, or stains—was apparent during the site reconnaissance. Moreover, much of the concrete basement floor was stained from standing water and mold growth, and, given the elapsed time since the tank was likely removed from the basement, any staining that may have resulted from a release may no longer be visible. However, evidence of historic coal usage was observed. Given the age of the building, it is likely that the boilers were converted from coal to fuel oil before their ultimate conversion to natural gas.

Tetra Tech requested copies of any documentation of any tank removal, but the reports could not be located during Phase I ESA.

Because of the inability to locate documentation of any tank removal and any associated cleanup or removal activity, a release from a former fuel oil storage tank cannot be precluded.

All rooms in the Switzer Complex and Switzer Annex buildings were visually assessed
for the presence of LBP, ACBM, and mold-impacted materials. Visual assessments
found suspected LBP in poor condition, suspected ACBM in severely damaged
condition, and visible heavy mold growth in multiple areas.

SECTION 8 OPINIONS

The Tetra Tech EP has determined that the inquiry has identified conditions indicative of releases or threatened releases of petroleum products or hazardous substances. One REC and one environmental concern were identified from review of historic records, review of environmental databases, site reconnaissance, or interviews.

This assessment has revealed evidence of one recognized environmental condition (REC) in connection with the subject property based on available information. Fuel oil likely was stored in at least one AST or UST in the Switzer Complex building. Any tank has since been removed. The condition of the floor in the basement, which had standing water and mold growth, prevented any assessment of staining or possible release. Tetra Tech was unable to obtain any documentation related to the removal or closure of an AST or UST. As a result, a release from a former fuel oil storage tank cannot be precluded. The likely presence of a fuel oil tank at the Switzer Complex building poses a REC to the subject property.

In addition to the REC related to probable storage of fuel oil, Tetra Tech identified an additional environmental concern. All rooms in the Switzer Complex and Switzer Annex buildings were visually assessed for the presence of LBP, ACBM, and mold-impacted materials. Visual assessments found suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth in multiple areas. The presence of suspected LBP in poor condition, suspected ACBM in severely damaged condition, and visible heavy mold growth pose an environmental concern to the subject property

SECTION 9 CONCLUSION AND RECOMMENDATIONS

Tetra Tech has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E 1527-05 and the SOW for the subject property at 1810 and 1829 Madison Avenue, Kansas City, Jackson County, Missouri. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report. This determination is based on site reconnaissance and interviews with KCMSD personnel.

Tetra Tech offers the following recommendations:

- Tetra Tech recommends a search for documentation related to the removal of any ASTs or USTs from the Switzer Complex building. If documentation cannot be located or if documentation cannot preclude a release from any AST or UST, Tetra Tech recommends limited sub-slab sampling for fuel-oil range petroleum hydrocarbons in the areas around basement floor drains.
- Tetra Tech recommends a full survey for LBP, ACBM, and mold-impacted materials—including sampling—to definitively identify any suspected hazardous materials and to determine the genus and species of observed mold growths.

SECTION 10
CERTIFICATION STATEMENT

The resume of the environmental assessor who conducted the site reconnaissance and prepared the report, and the resume of the environmental professional who oversaw completion of this work, are provided in Appendix D. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312.10 of this part. We have the specific qualifications based on education, training, and experience to assess a subject property of the nature, history, and setting of the subject property. We have developed and performed the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312, and attest to the completeness and accuracy of the information contained in this report.

We appreciate the opportunity to work with you on this project. If you have any questions concerning the findings and conclusions contained in this report, please call Project Manager Heather Wood at (816) 412-1787.

- 3. The estate or interest in the land described or referred to in this Commitment and covered herein is: Fee Simple
- 4. Title to the estate or interest in said land is at the effective date hereof vested in:

The School District of Kansas City, Missouri, Building Corporation, a not-for-profit corporation, as to Tracts I and II

5. The land referred to in this Commitment is described as follows:

SEE ATTACHED EXHIBIT A

MJ84641

SCHEDULE B 1 - REQUIREMENTS

The following are the requirements to be complied with:

- 1. (a) Pay the agreed amounts for the interest in the land or the mortgage to be insured.
 - (b) Pay us the premiums, fees and charges for the policy.
- 2. Instruments in insurable form which must be executed, delivered and duly filed for record:
 - a. Properly executed Corporation Warranty Deed from The School District of Kansas City, Missouri, Building Corporation, a not-for-profit corporation, to a Proposed Purchaser.
 - b. Properly executed Corporation Warranty Deed from The School District of Kansas City, a municipal corporation, to a Proposed Purchaser.
 - c. Furnish for our file a certified copy of the Resolution of the Board of Directors of The School District of Kansas City, Missouri, Building Corporation, a not-for-profit corporation, authorizing the proposed sale of said property.
 - d. Furnish certificate for our file executed by the Secretary of State of Missouri evidencing that The School District of Kansas City, Missouri, Building Corporation, a not-for-profit corporation is now in good standing in said state.
 - e. Furnish for our file a certified copy of the Resolution of the Board of Directors of The School District of Kansas City, a municipal corporation, authorizing the proposed sale of said property.
 - f. Furnish certificate for our file executed by the Secretary of State of its formation evidencing that The School District of Kansas City, a municipal corporation is now in good standing in said state.
 - g. Properly executed Deed of Trust from a Proposed Purchaser, to a Proposed Lender in an amount to be determined.
 - h. The application for our Title Insurance does not give the name of the prospective purchaser. When such name is ascertained, the records must be searched for possible judgments. If a Corporation or Partnership is to acquire title, certain additional requirements may be necessary.
 - We reserve the right to make additional requirements we deem necessary.
 - i. Partial Termination of the Lease Agreement by and between School District of Kansas City, Missouri, Building Corporation, and The School District of Kansas City, Missouri, filed November 29, 1984 as Document No. K639493

r. We find many judgments and orders too numerous to set forth at this time against The School District of Kansas City, which is one of the applicant sellers. It must be established to the satisfaction of the Company and our Underwriters, that title, when transferred to the Proposed Insured during the proposed transaction, will be free of the possibility of any execution upon any judgment lien.

Further, we require to the satisfaction of the Company and its Underwriters, that there is no litigation of any kind that will disturb the vesting of title in the proposed insured.

s. eRecording is defined as the process by which a lender, bank, title operation or government agency works with the county recorders office to process electronic documents using the Internet. Our company is currently participating in eRecording for Clay, Cass and Jackson County in Missouri. If applicable, an additional electronic recording service fee of \$4.00 per document will be assessed by the county at the time of recording.

SCHEDULE B 2 - EXCEPTIONS

Schedule B of the Policy or Policies to be issued will contain exceptions to the following matters unless the same are disposed of to the satisfaction of the Company.

1. Defects, liens, encumbrances, adverse claims or other matters, if any, created, first appearing in the public records or attaching subsequent to the effective date hereof but prior to the date the proposed insured acquires for value of record the estate of interest or mortgage thereon covered by this Commitment.

STANDARD EXCEPTIONS:

- 2. Rights or claims of parties in possession not shown by the Public Record.
- 3. Easements, or claims of easements, not shown by the Public Record.
- 4. Any encroachment, encumbrance, violation, variation or adverse circumstances affecting Title that would be disclosed by an accurate and complete survey of the Land or that could be ascertained by an inspection of the Land.
- 5. Any lien, or right to a lien, for services, labor, or material heretofore or hereafter furnished, imposed by law and not shown by Public Records.
- 6. Taxes, or special assessments, if any, not shown as existing liens by the Public Records.

SPECIAL EXCEPTIONS:

- 7. All assessments and taxes for the year 2008 and all subsequent years.
- 8. Easements, if any, for public utilities installed in, under or upon the vacated alley in Block 8 prior to the vacation thereof, and for which no notice appears in the Office of the Recorder of Deeds.
- 9. Utility Easements reserved by Kansas City over that part of the premises in question in vacated alley as set forth in Ordinance filed January 22, 1957 as Document B221515 in Book B7028 at Page 54.
- 10. Liens, if any, arising from the general judgment of indebtedness of The School District of Kansas City or its predecessors in title.
- 11. Tenancy rights, either as month to month or by virtue of written leases, of persons now in possession of any part of the premises in question.
- 12. PLEASE READ THE EXCEPTIONS AND THE TERMS SHOWN OR REFERRED TO HEREIN CAREFULLY. THE EXCEPTIONS ARE MEANT TO PROVIDE YOU WITH NOTICE OF MATTERS WHICH ARE NOT COVERED UNDER THE TERMS OF THE TITLE INSURANCE POLICY AND SHOULD BE CAREFULLY CONSIDERED. End of Schedule B2

APPENDIX D ASSESSOR AND ENVIRONMENTAL PROFESSIONAL RESUMES

Heather K. Wood, R.G. Hydrogeologist Tetra Tech EM Inc.

QUALIFICATIONS

Ms. Wood has a master's degree in geology and more than 10 years of consulting experience, including more than 4 years as an environmental consultant and more than 5 years as an information-systems consultant to state agencies. She has technical expertise related to groundwater quality evaluation, RCRA corrective action, RCRA compliance, RCRA and Superfund site assessment, Superfund hazard ranking documentation, hazardous waste management, and guidance and training development. Ms. Wood's experience as a consultant includes design and implementation of large systems, interviewing and training technical and non-technical personnel, and performing quality control reviews.

RELEVANT EXPERIENCE

EPA Experience

RCRA Environmental Indicators Evaluation

Environmental Indicators (EI) evaluations measure a RCRA corrective action facility's near-term progress toward annual cleanup targets for getting current human exposures controlled (form CA725) and migration of contaminated groundwater under control to minimize risk (form CA750). Completed CA725s and CA750s for facilities in Kansas, Missouri, Nebraska, and Iowa. Managed the work assignment. Reviewed CA725 and CA750 EIs completed by the facility for the Amoco refinery in Sugar Creek, Missouri. Reviewed documentation to establish levels and kinds of contamination, analyzed intensity and types of human exposures, and evaluated available groundwater gradient information. Oversaw development of EI reports for a military facility in EPA Region 5.

Compliance Evaluation Inspections of Hazardous Waste Facilities, Iowa

Under the REPA contract, Tetra Tech assists EPA Region 7 hazardous waste enforcement efforts across the state of Iowa. Generator, treatment, storage, and disposal facilities are inspected during unannounced site visits. Reviewed EPA files to prepare for site visit. Interviewed owners, operators, and facility representatives. Observed and documented facility operations, with a focus on waste management practices. Prepared reports of potential violations for EPA review.

Hazard Ranking, Kansas

A former smelting facility in Kansas was the subject of an ongoing hazard ranking assessment for inclusion on the National Priorities List. Collected and assessed a range of related documents, including previous EPA and Kansas Department of Health and Environment assessments, private evaluations sponsored by the facility, and discovery documents generated by potential responsible parties. Wrote descriptions of the nature and extent of contamination and quantified the number of targets and the intensity of their exposure. Calculated a preliminary hazard ranking score.

Spill Prevention Control and Countermeasures Inspections, western Nebraska

The Spill Prevention Control and Countermeasures (SPCC) act regulates the activities of petroleum storage and production facilities, with the goal of preventing contamination of rivers and streams. Thirty-two facilities in western Nebraska were inspected by three teams over a week. Photographed and documented violations of SPCC regulations. Interviewed facility owners and operators. Reviewed SPCC plans. Prepared reports and photographic logs documenting inspections.

Heather K. Wood, Tetra Tech EM Inc.

Other Government Experience

Site Investigations, Nebraska

Nebraska Department of Environmental Quality has tasked Tetra Tech with investigation of a number of groundwater contamination sites in the state. Prepared work plans, cost estimates, and sampling plans for the site investigation. Supervised mobile laboratories and Geoprobe crews. Collected soil and groundwater samples from Geoprobe sample points and groundwater samples from drinking water wells. Collected access agreements from property owners. Interpreted analytical results and other documentation to develop recommendations for future action. Prepared preliminary hazard ranking system score for the site.

Comprehensive Monitoring Evaluation, Nebraska

The Comprehensive Monitoring Evaluation (CME) is a part of ongoing RCRA corrective action at a facility. The CME for Behlen Manufacturing in Columbus, Nebraska, was prepared for Nebraska Department of Environmental Quality. Oversaw sampling events. Evaluated groundwater sampling and analysis plan, field procedures, documentation, and quality control measures. Reviewed previous reports and descriptions of groundwater contamination. Compared procedures to accepted professional guidelines. Evaluated the adequacy of Behlen's characterization of groundwater contamination and its ability to contain contaminated groundwater on its property.

Voluntary Cleanup Guidance, Nebraska

Nebraska Department of Environmental Quality is developing guidance materials for its voluntary cleanup program. The guidance will include information to help facility owners and operators and their consultants conduct investigations and cleanup their properties. Reviewed federal and state guidance documents. Assembled investigation and cleanup checklists from variety of sources. Prepared an annotated bibliography of relevant sources. Wrote guidance material for investigation and remedial action.

Private Client Experience

Phase I ESAs and Visual Site Inspections, Verizon, locations nationwide

These sites were potential locations for Verizon cellular telephone antennae. The antennae would be located on a variety of pre-existing structures or constructed on undeveloped land. Phase I ESAs were conducted at locations where new antennas or equipment sheds were to be built. Visual Site Inspections were conducted in locations where equipment sheds were to be expanded. Researched local geology, hydrogeology, and hydrology, interviewed site users and adjacent property managers, and investigated any possible recognized environmental conditions.

Phase II ESA, Verizon, locations nationwide

This site was the potential location for a new cellular antenna to be constructed by Verizon Communications. Because it was also the location of potential soil contamination, a Phase II ESA was conducted at the site. Selected soil sampling locations, collected surface soil samples, reviewed data quality, and wrote the ESA.

Permit Support, Delta Airlines, Georgia

Delta Airlines operates a large maintenance facility at the Hartsfield-Jackson International Airport and is in the process of closing its hazardous waste storage facility. Prepared a closure sampling plan. Documented already completed closure activities.

Groundwater Corrective Action Reports, Missouri Pressed Metals, Sedalia, Missouri

Missouri Pressed Metals produces bushings and bearings of sintered metal. Under the conditions of its Missouri Hazardous Waste Management Facility Permit, the facility is required to prepare an annual groundwater corrective action report based on semi-annual groundwater monitoring. Evaluated analytical and piezometric data, created contour maps of potentiometric surfaces, and wrote the resulting annual reports.

EMPLOYMENT HISTORY

2001 - Present Tetra Tech, EM Inc.

8030 Flint

Lenexa, KS 66214

1998 – 2001 University of Kansas

120 Lindley Hall Lawrence, KS 66044

1997 – 1997 Andersen Consulting

Austin, TX

EDUCATION/SPECIAL TRAINING

M.S., Geology, University of Kansas, Lawrence, Kansas, 2001 Postgraduate study, Geology, University of Texas, Austin, Texas, 1995-1997 B.A., History, Trinity University, San Antonio, Texas, 1991

40-hour OSHA health and safety training for hazardous waste operations (2001, 8-hour refresher as of 2006)

RCRA Corrective Action (2002)

Planning for Quality Project Management Training (2002)

Technical Writing (2003)

EPA Confidential Business Information Training (2005)

REGISTRATIONS/CERTIFICATIONS

2007, Registered Geologist, Missouri (License No. 2007006640) 2006, Water Well Monitoring Technician, Nebraska (Certificate No. 79492)

Jeffrey Mitchell Agronomist/ Environmental Scientist Tetra Tech EM Inc.

PROFESSIONAL EXPERIENCE

Mr. Mitchell is an Agronomist/Environmental Scientist, with a wide range of relevant professional experience. He has worked in the private sector as an environmental assessor for livestock facilities throughout the county, consulting with producers on environmental issues. He has experience with scientific data collection including sampling of water and soil. He is able to develop environmental management plans and provide technical support to livestock producers.

Environmental Site Assessments - Mr. Mitchell has numerous performed Phase I and II Environmental Site Assessments (ESA's) for various private and municipal clients including Verizon Wireless, local city governments, and real estate development companies. Mr. Mitchell has assisted in the projects by soil screening via XRF Niton or Photoionization Detector (PID), and soil and groundwater collection via GeoProbe[®]. He recently participated in the KC Live development project in downtown Kansas City, Missouri where he completed oversight requirements of the contract. Mr. Mitchell has experience in completing National Environmental Policy Act (NEPA) reports that identify native endangered or threatened species in sensitive areas.

Site Clearing, Demolition and Soil Remediation - Mr. Mitchell assisted the Project Manager at the KC Live Redevelopment District, a nine-square city block area undergoing massive site clearing initiatives to prepare the sites for the developers. The dynamic nine-block mixed-use development will include more than 3-million square feet of destination entertainment and shopping, in addition to office, residential, and parking facilities. The teams where responsible for performing all environmental consulting work at the KC Live project site, including demolition, and environmental abatement in the existing buildings and parking lots including the remediation of any contaminated soils. His responsibilities included oversight on active blocks during remediation and demolition for all active blocks, coordination between multiple contractors and the City Managers office. The team recently won an environmental achievement award from the City of Kansas City, Missouri.

Agricultural Site Assessments - Mr. Mitchell has delineated the extent of groundwater and surface water contamination from seeping multi-staged lagoons for a large livestock producer in central Kansas. Mr. Mitchell participated in a third-party verification program for the national On-Farm Assessment and Environmental Review (OFAER) Program. He has provided oversight/verification for more than 200 OFAER assessments and implemented over 400 follow-ups to verify correct implementation of the program and gather program impact data. Mr. Mitchell also assisted in development of training programs, standard operating procedures, and quarterly verification statements in support of the program.

Geotechnical Assessment - Mr. Mitchell has assisted a Geotechnical driller on various sites throughout the Kansas City metro area, logging soil and bedrock samples, and installing temporary monitoring wells. Mr. Mitchell has obtained sampling data from a multitude of monitoring wells and soil samples. Mr. Mitchell delineated the extent of groundwater and surface water contamination from seeping multi-staged lagoons for a large livestock producer in central Kansas.

Agricultural Management Plans - Mr. Mitchell worked with the Nebraska Department of Environmental Quality to develop Catastrophic Mortality Management plans for livestock producers across the state. Including development of a ranking system for all soil types in state for their

suitability of disposal of deceased livestock. Using this ranking system Mr. Mitchell identified burial plots for 45 poultry CAFO's in the state of Nebraska, based on flock size. Mr. Mitchell has experience in developing Comprehensive Nutrient Management Plans for livestock producers in the State of Missouri.

Oder Management - Mr. Mitchell helped design and maintain an oil-sprinkling system for Premium Standard Farms in Missouri as part of a pilot program to help reduce dust and odor emissions from hog finishing operations. Mr. Mitchell has prepared parts of an Environmental Work Plan for Premium Standard Farms, Inc. (PSF), specifically dealing with alternative cropping strategies to increase nutrient uptake.

Foreign Animal Disease Planning - Mr. Mitchell worked on a Foreign Animal Disease (FAD) plan for the Kansas Animal Health Department. This effort included the development of a Standard Operating Guide for a FAD event and an accompanying annex with detailed information on stopping the spread of a FAD. Through planning sessions and a web based database (WebEOC), all 105 Kansas counties were provided with a FAD plan.

Nutrient Management Planning - Mr. Mitchell assisted the project manager in a project for the Texas Department of Criminal Justice (TDCJ) involving work on 13 prison farms. Description of work includes designing nutrient management plans (NMP) for 10 confined animal feeding operations (CAFOs) and 3 animal feeding operations (AFOs); designing pollution prevention plans (PPP) and obtaining air quality authorization for the 3 AFOs; surveying lagoons of the 3 AFOs; reviewing existing CAFO permits and PPPs to determine maximum capacity; and amending 10 CAFO permits to increase head counts by 49%.

Hazardous Materials Surveys - Mr. Mitchell is certified in Hawaii, Nebraska and Missouri to perform asbestos inspections and is certified in Kansas, Missouri and Nebraska to perform lead based paint inspections. Mr. Mitchell has performed numerous hazardous materials surveys for American Airlines, the City of Kansas City, Missouri and other municipalities, the University of Missouri – Kansas City (UMKC), Verizon Wireless, commercial property owners throughout the country and on United States Air Force and Naval bases in Hawaii and California. Specific Hazardous Materials Survey's Mr. Mitchell has participated and/or lead include 150 single family homes damaged by tornados in Caruthersville, Missouri, the 4-story 175,000 square foot Miller-Nichols Library on the UMKC Campus, a 280,000 square foot, 27 building apartment complex in Phoenix, Arizona, a 9-story and 3 story, temporary housing structure on the United States Coronado Naval Base in San Diego, California and 70 single and multi-family homes on the United States Hickam Air force Base in Honolulu, Hawaii. He has worked with these clients to achieve compliance in order to avoid future litigation and the safety of personnel at these locations. He is experienced with calibrating equipment use in detecting lead and assessing these contaminants. Mr. Mitchell has sampled outdoor and indoor air for the presence of contaminants, including mold.

Resource Conservation and Recovery Act (RCRA) Inspections – Mr. Mitchell has performed a variety of RCRA compliance inspections and evaluations for EPA under the REPA contract, including compliance assistance visits (CAV) for Region 7 in the state of Iowa and Missouri. The CAVs provide assistance to junior and senior high schools throughout Iowa and Missouri on compliance with generator requirements. The inspections included on-site record reviews and interviews with facility personnel, and visual inspections of the hazardous waste management areas. Following the CAVs, Mr. Mitchell prepared reports for EPA detailing the inspection activities and issues of concern and non-compliance.

Superfund Technical Assessment and Response Team (START) – Mr. Mitchell has been involved in START projects, working on sites involving lead removal, and groundwater, soil, and private well sampling. Furthermore, Mr. Mitchell has participated in START Hurricane Katrina Response activities in the impacted Gulf Region. Mr. Mitchell's primary Hurricane Response duties consisted of hazardous waste and site reconnaissance.

EMPLOYMENT HISTORY

2003 to present - Tetra Tech EM Inc., Environmental Scientist 2003 to 2003 - Kruger Technologies, Lab Technician & Geotechnical Driller's Assistant 2000 to 2003 - SES Inc., Environmental Scientist/Agronomist

EDUCATION

B.S. Agriculture - Soil and Water Conservation, Kansas State University, 2000. Secondary Major in Natural Resources & Environmental Science, December 1999.

CERTIFICATIONS/TRAINING

Certified Asbestos Inspector in Hawaii, Missouri and Nebraska
Certified Lead Inspector in Kansas, Missouri and Nebraska
The American Heart Association CPR/AED/First Aid Certification
Department of Homeland Security Emergency Management Institute ISO-100 and 200
Agroterrorism Extension Level Training, Kentucky Department of Agriculture
USEPA 40 CFR 763 (AHERA) Asbestos Inspector Training
OSHA 29 CFR 1910.120 40-Hr Safety Training & OSHA 29 CFR 1910.120 8-Hr Refresher Training
OSHA 29 CFR 1910 Level A Personnel Protective Equipment

MEMBERSHIPS

Soil and Water Conservation Society

Rachel R. Treanor Environmental Scientist/Project Manager Tetra Tech EM Inc.

PROFESSIONAL EXPERIENCE

Ms. Treanor is a Project Manager and an Emergency Responder with a wide range of professional and technical experience. Her technical skills come from her attendance at numerous training sessions and her extensive fieldwork experience. She has received certificates of completion and proficiency in Level-A Personal Protective Equipment (PPE), the HazMat ID Portable Instrument, the Department of Homeland Security-IS-200 Incident Command System Training for Federal Disaster Workers, and the Tetra Tech EMI Mold Assessment Workshop. Ms. Treanor has attended training sessions related to municipal water supply systems and related water quality and system security issues at the Midwest Security and Preparedness conference in 2004. She is trained in emergency response activities for chemical, biological or radiological agents. Ms. Treanor is qualified to collect a variety of media including air, water, soil and mold and can effectively interpret critical analytical data to clients. She is able to develop environmental management plans and provide technical support to environmental policy development initiatives.

Environmental Analysis and Permitting

- Environmental Site Assessments- Ms. Treanor has performed numerous Phase I and Phase II Environmental Site Assessments (ESA's) for various private and municipal clients including local Brownfield's task groups, the National Parks Service, Verizon Wireless, local city governments, and real estate development companies. She recently participated in the KC Live development project in downtown Kansas City, Missouri where she completed oversight requirements of the contract. Ms. Treanor has experience in completing National Environmental Policy Act (NEPA) reports that identify native endangered or threatened species in sensitive areas. She has researched, completed, and implemented an Environmental Impact Statement (EIS) at a public airport in Virginia.
- Environmental Compliance- Ms. Treanor was responsible for bringing a private company into a compliance status with the creation and implementation of a company wide Storm Water Pollution Prevention Plan. Local, state and federal regulations were researched and addressed to cover manufacturing processes in place at the facility. Knowledge of state and local environmental regulations was shared with maintenance and truck garage staff to encourage compliance and reduction of hazardous substances. She was responsible for federal and state annual chemical inventory reporting including Form R and Tier II, Material Safety Data Sheet (MSDS) categorization, and permit renewal for Underground Storage Tanks (UST) and boilers.

Hazardous Waste Programs

■ Hazardous Waste Technician — Ms. Treanor is a volunteer technician at the Household Hazardous Waste Programs in Lawrence, Kansas, Kansas City, Missouri and Kansas City, Kansas. She is responsible for sorting like chemicals, and preparing numerous lab-packs to be shipped off site for disposal or reclamation.

Site Clearing, Demolition and Soil Remediation

■ *Project Manager* - Ms. Treanor is the Project Manager at the KC Live Redevelopment District, a nine-square city block area undergoing massive site clearing initiatives to prepare the sites for the developers. The dynamic nine-block mixed-use development will include more than 3-million square feet of destination entertainment and shopping, in addition to office, residential, and parking facilities. She and her teams are responsible for performing all environmental consulting work at the KC Live project site, including demolition, and environmental abatement in the existing buildings and parking lots including the remediation of any contaminated soils. Her responsibilities include providing a point of contact to city project managers for any and all work occurring in the field, securing state tax-credits for buildings participating in the Missouri Department of Natural Resources (MDNR) Brownfield's / Voluntary Clean-up Program (BVCP), defining specifications and scope of work and overall oversight for all active blocks. Her team recently won an environmental achievement award from the City of Kansas City, Missouri.

Environmental Sampling

- Asbestos, Lead and Mold Inspections and Reporting- Ms. Treanor is certified in Kansas, and Missouri to perform asbestos inspections and to publish asbestos management plans. Ms. Treanor has performed numerous asbestos inspections for local municipalities, Verizon Wireless, local government agencies, school districts, property owners and local housing authorities. She is certified in Kansas and Missouri to perform lead inspections and to publish lead risk assessments. She has performed numerous lead inspections for property owners, local housing authorities and the MDNR BVCP. She has worked with property owners to achieve compliance to ensure tenant safety. She is experienced with calibrating equipment and assessing contaminants. She continues to implement safety protocols and derives at compliance solutions for municipal and private industry clients. Ms. Treanor has sampled outdoor and indoor air for the presence of contaminants, including mold. Ms. Treanor has assessed and sampled various dwelling units for the presence of mold and mold contaminants. Ms. Treanor performed air monitoring and tape sampling, to identify the presence of mold in individual residents. Ms. Treanor has also collected and interpreted samples for the presence of carbon black; petroleum based carcinogenic dust.
- Carbon Black- Ms. Treanor led a team of sampling professionals on a multi-location sampling event to identify the presence of Carbon Black. The sampling event was executed to obtain representative particulate samples from several commercial, residential, and government locations in Ponca City, Oklahoma. The samples were characterized for carbon black (a submicron black carbon powder commercially produced under controlled conditions by burning hydrocarbons in insufficient air utilizing Transmission Electron Microscopy [TEM] and Energy Dispersive X-ray [EDX]). The overall goals of particulate sampling were to collect samples that were representative of the contaminated area. To achieve this goal, areas that appeared to contain black particulates were sampled. The purpose of collecting black particulate was to identify if these samples contained materials consistent or inconsistent with manufactured carbon black

Emergency Response and Preparedness

■ Graniteville Train Collision and Chlorine Release - In 2005, Ms. Treanor assisted the Environmental Protection Agency (EPA) as a Superfund Technical Assessment and Response Team (START) member at the Graniteville Train Collision and Chlorine Release in Graniteville, South Carolina. She was responsible for implementing the FAST technology at the site for the rapid transmission of air monitoring data. She worked to establish evacuation and re-occupation zones for

Rachel R Treanor, Tetra Tech EM Inc.

displaced residents. Ms. Treanor was responsible for calibrating, maintaining, and compiling airmonitoring data from the mobile Area REAS units. She was also responsible for the inventory, calibration and maintenance of all monitoring and personal protective equipment at the site. Ms. Treanor was able to quickly interpret air-monitoring results to derive the acceptable PPE (Level B or C) for the job at hand.

- Space Shuttle Columbia Disaster, START Team Member Ms. Treanor participated in the N.A.S.A Space Shuttle Columbia STS 107 Mission Recovery Project. Ms. Treanor worked in central Texas as an EPA S.T.A.R.T team member and directly supervised up to 42 individuals on a daily basis. She participated in grueling physical activities required in the field. Ms. Treanor was directly responsible for digital photographic documentation, GPS coordinates, entering field data into a Personal Digital Assistant, and assigning sample identification numbers to recovered shuttle materials. Ms. Treanor worked closely with representatives from the National Forest Service, EPA, the Tennessee Valley Authority and N.A.S.A for the duration of the project
- *Mercury Response-* Ms. Treanor keeps current on the latest emergency response training techniques; exercises and equipment expertise pertaining to mercury clean up efforts. She is trained and proficient in operation mercury detection devices including the Lumex and Jerome models. She has participated in residential mercury clean-up projects and has participated in numerous mock mercury spill response scenarios.
- **Bioterrorism and Homeland Security-** Ms. Treanor worked extensively on a statewide Bioterrorism Needs Assessment Survey for the State of Iowa Department of Public Health. Her duties included researching relevant terms and equipment utilized during a bioterrorism attack. She worked closely with numerous health care facilities across the state to validate information and to relay the importance of accurate facility reporting. This high profile project required technical competency to complete tasks and adhere to strict time constraints.
- **Emergency Response Directory-** Ms. Treanor was the project manager tasked to complete a telephone and informational directory of emergency response agencies and associated contacts across the nation. The directory included detailed contact information for emergency response agencies such as local emergency planning committees; state emergency management agencies, poison control centers and the United States Coast Guard.

PROFESSIONAL ORGANIZATIONS/ASSOCIATIONS

"Environmental Management Commission", City of Kansas City, Missouri, Compliance Committee Chair (pending), October 27th to Present

SECURITY CLEARANCES

General Services Administration (GSA), Heartland, Region 6 (as of 2002) DOD "L" security clearance (as of 2000)

Michelle Nicholson Environmental Assessor/Hazardous Materials Inspector Tetra Tech EM Inc.

PROFESSIONAL EXPERIENCE

Ms. Nicholson is an Environmental Assessor and Hazardous Materials Inspector, with a wide range of professional and technical experience. Her technical skills come from her attendance at numerous training sessions and his extensive fieldwork experience. She has worked in the private sector as an environmental assessor for clients throughout the county, consulting on environmental issues. She has experience with scientific data collection including sampling of air, water, soil and hazardous materials. She is able to develop environmental management plans and provide technical support to environmental policy development initiatives.

Environmental Site Assessments - Ms. Nicholson has performed Phase I and II Environmental Site Assessments (ESA's) for various private and municipal clients including Verizon Wireless, local city governments, and real estate development companies. Ms. Nicholson has assisted in the projects by collecting soil and groundwater samples. She has experience in completing National Environmental Policy Act (NEPA) ESA's and reports that identify native endangered or threatened species in sensitive areas.

Hazardous Materials Surveys – Ms. Nicholson is certified in Hawaii and Missouri to perform asbestos inspections. She has performed numerous hazardous materials surveys for American Airlines, the City of Kansas City, Missouri and other municipalities, the University of Missouri – Kansas City (UMKC), the U.S. Environmental Protection Agency, Verizon Wireless, commercial property owners throughout the country and on United States Air Force and Naval bases in Hawaii and California. Specific Hazardous Materials Survey's Ms. Nicholson has participated and/or lead include 33 buildings on the Chillicothe Corrections Center in Chillicothe, Missouri, the 4-story 175,000 square foot Miller-Nichols Library on the UMKC Campus, a 280,000 square foot, 27 building apartment complex in Phoenix, Arizona, a 9-story and 3 story, temporary housing structure on the United States Coronado Naval Base in San Diego, California and 70 single and multi-family homes on the United States Hickam Air force Base in Honolulu, Hawaii. She has worked with these clients to achieve compliance in order to avoid future litigation and the safety of personnel at these locations. She is experienced with calibrating equipment use in detecting lead and assessing these contaminants.

Homeland Security Software Development - Ms. Nicholson serves as the system analyst for the development effort of the web based Electronic Grants Management System (EGMS). This has included the collection, documentation and design of business and system requirements using the Rational Unified Process, Joint Application Development Sessions and the Unified Modeling Language. She has been a part of the project both from an internal development perspective and directly with the client. She leads the development effort and design of the Ad Hoc Reporting Wizard in EGMS. This includes requirement gathering with the client, design and layout of the module, testing, delivery and training the client on the final product. Ms. Nicholson has also designed and customized the Quality Website in Microsoft SharePoint to enhance company communications for 8,500 employees.

Homeland Security Consulting Services - Ms. Nicholson is part of the team who has designed, assembled and hosted Homeland Security full-scale exercises relating to Urban Search and Rescue, HazMat Response teams and Earthquakes across the nation. Ms. Nicholson has provided professional consulting services to the Missouri's State Emergency Management Agency (SEMA) and Office of Homeland Security. She was part of a team that designed a detailed project approach for the creation of a 5 year Homeland Security Plan. She has also aided SEMA in writing numerous Federal Grants, Federal Reporting, Business Process Improvement and writing and submission of Investment Justifications.

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2008 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 07/09/2008 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
BIRCH TELECOM STYRENE ODOR	2115 CENTRAL AVENUE	1/4 - 1/2 ESE	- ·	81
PCB INC - MISSOURI	2100 WYANDOTTE ST	1/4 - 1/2 ESE		110

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there are 5 CERC-NFRAP sites within approximately 0.5 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 08/20/2008 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 08/20/2008 has revealed that there are 8 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

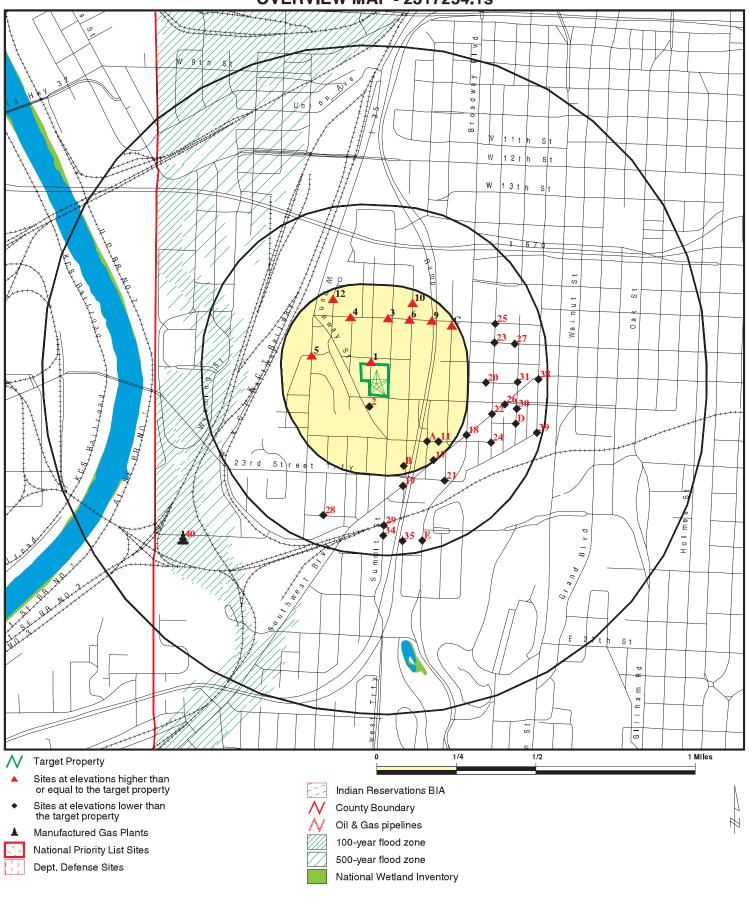

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with

the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream

classification framework

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

02/24/00 HRM Reviewed response. Asked for closure documention. 01/20/01 HRM Ranked file using new system. RP has not responded to any update letters. Possible candidate for investigations list? 3/13/01 JLG call from Norman Gardner, handling the site - got our status request letter & is preparing to respond with documents regarding closure. Will send them within 30 days. 4/30/01 MAS Rev'd CR and requested add't info for 9 items and requested SC work plan. 5/29/01 MAS Rec'd a phone call from Mr. Molley's attorney, John Edgar, asking for a couple of weeks to respond to the closure report review letter. OK 6/14/01 MAS rec'd phone call from Mr. Edgar to inform the dept. that he was intending on hiring a consulting firm to address the site characterization requests and asked that he be given thirty days to turn in a work plan and address the closure items. 11/14/01 MAS: rev'd request for extension for submittal of WP, gave them 30 days to respond with WP. Reviewed response letter which took care of items 4,5,6 and 7 of the April 30, 2001 dept letter. 2/5/02 ET Reviewed Dec 18, 2001 letter. Only item #9 is outstanding. Appr'd testin the utility manholes. 7/17/02 ET Reviewed results of vapor testing. Drafted a NFA. 03/21/07 - Entered NFA date in database. Unclear why it was never entered before. - LL

Comments:

4/14/95 JM APPROVED CAP MODIFICATIONS. AWAITING ACTIVITIES UPDATE. 8/9/99 kk sent update letter for CAP plan that was approved on 4/14/95. 12/14/00 kk rev SC work plan (11/30/00). Approved 10 soil borings to confirm contamination on and off-site. Up to eight of the borings will be converted into gw monitoring wells. 9/14/01 kk rev file. Reg update on SC plan. 12/20/01 kk rev response letter dated November 15, 2001. Sent response back indicating we still need site characterization work.1/17/03 BAS - sent request update letter 1/15/04 MLM- Review add site charact report with recommendations/proposal. 7 borings have benzene or TPH over soil limits. 11 wells have BTEX or TPH over gw limits. Existing well EW-1 has free product. PROPOSAL recomments 1. Perform a short term (four events) high vacuum extraction (HVE) recovery at wells MW-1, MW-2, MW-3, and EW-1 to recover free product and groundwater containing elevated concentrations of BTEX and TPH. 2. Provide a summary report for the HVE.3. Prepare an encroachment permit for drilling in off-site areas in the city right-of-way. 4. Install 5 permanent off-site monitoring wells. 5. Prepare a site characterization report. Approved, but indicated MRBCA data could be collectedat the same time. Requested one additional well located SW of EW1 with free product. They can choose for: 60 days for new proposal or may continue with work plan as writing (with extra well) gave 160 days for report. 02/19/04 MLM - Review letter from consultant indicating PSTIF will not cover costs of survey for off-site drilling (\$6000), will only act when MDNR and PSTIF agree. Spoke to Dave Pate and we agree to have them collect MRBCA data and perform initial phases of risk assessment todetermine if off-site investigation is necessary. Send letter stating so. 04/29/2005 - Found two work plans from different consultants. Contacted Fine Environmental. Received fax of letter from owner representative stating new consultant is FineEnvironmental. Approved Work Plan for 10 borings with 6 wells. - LL 9/27/05:HM:revd T-1 and 2 report of July 19, 05. Regestd response to 5 items. 10/25/05 - Reviewed responses to risk assessment comments. All items addressed adequately. Requested GW monitoring report in 90 days, and free

product recovery report in 30 days. - LL 8/21/06 MA rev a limited SC/groundwater monitoring report. FP is still present in EW-1, MW-12, MW-14, and MW-18 at a thickness that ranges between 1 to 7 inches. The HVE events have been successful in FP recovery efforts during which most of the FP was recovered from MW-14 and MW-18. However, a measurable amount of FP is still present in EW-1 and MW-12. Therefore, concurred with recommendations to continue FP recovery/groundwater monitoring activities to establish plume stability. 1/10/08 vg rev gwmr, FP still present in EW-1, need to continue FPR activities & GWM. Also advised that their Tier 2 SSTLs were not properly calculated due to useof improper value for FOC. SSTLs need to be recalculated. Also need to determine the usability of gw for future domestic use pathway. Also need to replace or repair MW2 & MW3 because they are in an area where there has been FP and the gw levels have always been several feet above the top of the screened interval. 3/11/08 vg app wp for closure and replacement of MW-2 & MW-3, 3 HVE events for FPR, and 4 gwm events. Also reviewed response regarding FOC analysis, lab confirmed that the reported value has already been converted from organic matter to carbon content. That conversion was built into the lab's reporting method. Therefore the FOC value can be used directly as reported by lab.

22 INDEPENDENT ELECTRIC MACHINERY

East 300 SOUTHWEST BLVD 1/4-1/2 KANSAS CITY, MO 64108 0.331 mi.

FINDS 1000209493 CERC-NFRAP MOD007121643 RCRA-NonGen

Relative: FINDS:

Lower Other Pertinent Environmental Activity Identified at Site

Actual: 793 ft.

1749 ft.

The MO-DNR (Missouri Department of Natural Resources) program involves a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when

Direction Distance

Elevation Site Database(s) EPA ID Number

INDEPENDENT ELECTRIC MACHINERY (Continued)

1000209493

EDR ID Number

complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Comments: Contamination remediated to the cleanup levels established for the site except

for Benzo(a) pyrene and Benzo (b) fluoranthene, which was detected beneath the building in the sample collected south of the 300 gallon tank, that was closed in place. No further action was required for these two constituents based on their location beneath the building and the fact that the contaminants were not

a threat to groundwater. 5-05-1999. D.L.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008 Waste name: LEAD

FINDS:

Other Pertinent Environmental Activity Identified at Site

The MO-DNR (Missouri Department of Natural Resources) program involves a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

approved. 5/6/98 MJK Sampling of wells and three additional borings approved. 12/21/98 rdh rev'd Add. Soil and GW sampling report, requested add'l. OE north of tank pitbefore SVE and air sparging 4/23/99 rdh approved workplan for OE of 200 addt'l yds. 10/1/99 rdh rev'd OE report, most contam. soil removed, gw

2/16/95 SJ REQUESTED CORRECTIVE ACTION. 2/20/98 MJK Pump and treat system not

remains, requested CAP for gw mon. before SV/AS implementation, 1/27/00 rdh tel. conf. w/ J. Fletcher, wp coming. 7/10/00 Doug Rock (Tetra-tech) called, sending in wp. 8/8/00 rdh rec'd wp for gwm plan. approved 02/05/01 blb Rev'd gwm draft report. Called Tetra Tech and advised to send final report and ORC workplan. ORC was proposed by phone by Andrew Mazzeo. 04/17/2001 blb Rev'd GWMR. Levels are decreasing. MW-1 and MW-3 exceed guidelines. Requested semiannual GWM workplan can discontinue OA-2. 08/14/2001 blb Rev'd GWM workplan. Proposed semiannual testing of all wells for two years OA-1 only. Approved as submitted 2/14/02 MAS: Rev'd last GWMR and requested CAP for installation of replacement well MW-5 (destroyed) and ORC use w/in 30 days. 5/10/02 MAS: Approved CAP for replacement of MW5 and ORC injection. Requested addendumto address remining soil contamination in the vicinity of TS-1.

9/21/02 kk rev addendum to CAP dated July 19, 2002. Approved plan. 2/23/03 BAS - reviewed corrective action final report dated December 9, 2003. Report documented installation of MW-8 (which was replacement well for MW-5) and ORC injection. MW-8 was a 2 inch well drilled to a total depth of 20 feet BGS, water was encountered at 11 feet. All petroleum constituents in GW from MW-8 ND except X which was 6.38 ppb, well below cleanup levels. All soil samples from MW-8 were ND. ORC was injected October 23 to October 25, 2002. A total of 60 borings were used with 1, 200 # of ORC injected (20#/boring). Treatement area is expected to be between 6 and 16 feet bgs. Wrote responseletter looking forward to 1st GW monitoring report which is scheduled for Jan 2003. With the 1st GWM report expect a soil sample from the area TS-1 to determine ORC treatment effectiveness in soil. 03/04/03: TC telephone call with Andy Mazzeo of TetraTech. They would like to hold off soil sampling at TS1 until 4th qtr 2003 to allow ORC to have some effect. Agreed to the delay. 6/2/03: TC rvw gw

mon rpt; ORC injection in November 02 - 1200 lbs in 55 probes; MW1 and MW3 continue to exceed for Benzene, benzene increased in both since ORC; ORC not yet having measurable effect. 6/3/03: TC rvw 2nd qtrly gw mon rpt (since ORC injection) - benzene increased in MW1 and MW3 for second straight quarter; ORC not yet having positive effect. Two approved gw mon events remain. 3/3/04 FJH rec'd call from Andy Mazzeo (sp?), Tetratech, Inc. He inquired as to status of Dec 03 GWM report. I confirmed receipt & acknowledged it has not been reviewed. I directed him to obtain MRBCA from web &conduct Tier I risk assessment; that may provide options for reaching closure at this site sooner than under the old guidance. 3/19/04 MAS: Rev'd two GWMR and all is good with the exception of Benzene in MW-1 which fluctuates to just above clenaup levels. Soil contamination remains above cleanup standards. Indicasted that if they wanted closure without removing soil then a Risk assessment must be performed. 6-14-05 ET Rec'd Tier 1 rpt dated 5/2/05. Levels below old Tier 1 std. HighBenzene in soil near TS-1 during October 2004 probing. TS-1 is near the west border of the site, away from bldg. These cont exist at 13 to

15 bgs and below general gw levels. Need RG seal and sent checklist for

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/30/2008 Source: EPA
Date Data Arrived at EDR: 05/06/2008 Telephone: N/A

Number of Days to Update: 34 Next Scheduled EDR Contact: 10/27/2008

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/30/2008 Source: EPA

Number of Days to Update: 34 Next Scheduled EDR Contact: 10/27/2008
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Next Scheduled EDR Contact: 09/15/2008 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 08/20/2008 Date Data Arrived at EDR: 08/21/2008 Date Made Active in Reports: 09/09/2008

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

MO BROWNFIELDS: Brownfields Site List

Brownfields are sites where redevelopment and reuse is hampered by known or suspected contamination with hazardous substances. While many brownfield sites are minimally contaminated, potential environmental liability can be a problem for owners, operators, prospective buyers and financial institutions. Because of the large number of these sites, their economic impact especially in heavily industrial areas is substantial.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Elevation: 870 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 39094-A5 KANSAS CITY, MO

Most Recent Revision: 1996

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

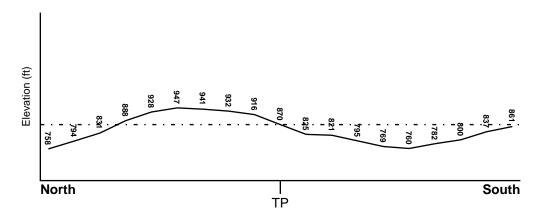

TOPOGRAPHIC INFORMATION

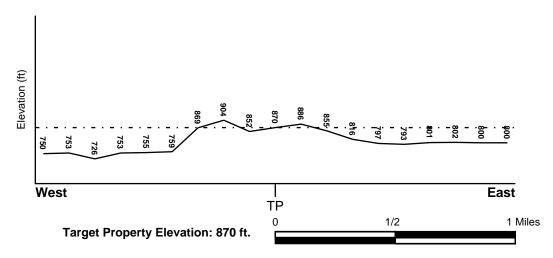

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

KANSAS CITY

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID Not Reported LOCATION FROM TP GENERAL DIRECTION GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:

Hydrologic Group: Not reported

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after

August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Missouri Public Drinking Water Wells

Source: Department of Natural Resources

Telephone: 573-526-5448

OTHER STATE DATABASE INFORMATION

RADON

Area Radon Information Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

PROFESSIONAL EXPERIENCE

Ms. Norton is a Project Manager and an Emergency Responder with a wide range of professional and technical experience. Her technical skills come from her attendance at numerous training sessions and her extensive fieldwork. She has received certificates of completion and proficiency in Level-A Personal Protective Equipment (PPE), the HazMat ID Portable Instrument, the Department of Homeland Security-IS-200 Incident Command System Training for Federal Disaster Workers, and the Tetra Tech Mold Assessment Workshop. Ms. Norton has attended training sessions related to municipal water supply systems and related water quality and system security issues at the Midwest Security and Preparedness conference in 2004. She is trained in emergency response activities for chemical, biological or radiological agents. Ms. Norton is qualified to collect a variety of media including air, water, soil and those affected with asbestos, lead and mold. She can effectively interpret critical analytical data to clients. She is able to develop environmental management plans and provide technical support to environmental policy development initiatives.

Project Management

Power & Light Redevelopment District - Ms. Norton is the Project Manager at the Power & Light Redevelopment District (Power & Light). Power & Light is a nine-square city block area that has currently undergone massive site clearing initiatives to prepare the sites for the developers. The dynamic nine-block mixed-use development will include more than 3-million square feet of destination entertainment and shopping, in addition to office, residential, and parking facilities. She and her teams are responsible for performing all environmental consulting work at the Power & Light project site, including demolition, and environmental abatement in the existing buildings and parking lots including the remediation of any contaminated soils. Her responsibilities include providing a point of contact to city project managers for any and all work occurring in the field, securing state tax-credits for buildings participating in the Missouri Department of Natural Resources (MDNR) Brownfield's / Voluntary Cleanup Program (BVCP), defining specifications and scope of work and overall oversight for all active blocks. Her team recently won an environmental achievement award from the City of Kansas City, Missouri. This project also won the American Public Works Association (APWA) Project of the Year Award for the Environment Category, 10 to 100 Million for Environmental Abatement and Building Design.

Asbestos Surveys, Caruthersville, Missouri – Ms. Norton was the project manager responsible for the inspection and final report documentation for over 140 residential properties ravished by an F-4 tornado that his the town of Caruthersville, Missouri. She worked closely with the Mayor and Disaster Response Manager as they reported to the Federal Emergency Management Agency. Her work led to ensure adequate funding for clean up and re-building strategies. The damaged properties scheduled for demolition needed asbestos inspections prior to demolition activities, in order to comply with the United States Environmental Protection Agency (EPA) National Emission Standard for Hazardous Air Pollutants – Asbestos (NESHAP) 40 CFR, Part 61, Subpart M—specifically, Section 61.145, Standard for Demolition and Renovation.

Mold Assessment and Remediation – Ms. Norton was the project manager responsible for providing industrial hygiene consulting services at residential barracks for the Fort Riley Army Base, in Ft. Riley, Kansas. She was tasked to identify the presence of mold spores on building materials. The scope of work included providing a summary, recommendations, and conclusions from a visual assessment and sampling event. Remedial recommendations were included in the final report and included goals of remediation that are to remove and/or clean contaminated materials in a way that prevents the emission of fungi and dust contaminated with fungi from leaving the work area and entering an occupied or non-abatement area, while protecting the health of workers performing the abatement. She also acted as the health and safety professional with experience performing microbial investigations for the duration of the project. She has also been the project manager responsible for providing industrial hygiene consulting services at a large retirement village in Prairie Village Kansas. The scope of work consisted of A visual inspection, sampling and remedial design.

Environmental Sampling

Hazardous Materials Surveys – Ms. Norton is certified in Hawaii, Nebraska and Missouri to perform asbestos inspections and is certified in Kansas, Missouri and Nebraska to perform lead based paint inspections. Ms. Norton has performed numerous hazardous materials surveys for American Airlines, the City of Kansas City, Missouri and other municipalities, the University of Missouri – Kansas City (UMKC), Verizon Wireless, commercial property owners throughout the country and on United States Air Force and Naval bases in Hawaii and California. Specific Hazardous Materials Survey's Ms. Norton has participated and/or lead include 150 single family homes damaged by tornados in Caruthersville, Missouri, the 4-story 175,000 square foot Miller-Nichols Library on the UMKC Campus, a 9-story and 3 story, temporary housing structure on the United States Coronado Naval Base in San Diego, California and 70 single and multi-family homes on the United States Hickam Air force Base in Honolulu, Hawaii.

Rachel T Norton, Tetra Tech EM Inc.

He has worked with these clients to achieve compliance in order to avoid future litigation and the safety of personnel at these locations. She is experienced with calibrating equipment use in detecting lead and assessing these contaminants.

Asbestos and Lead-Based Paint Inspections and Reporting- Ms. Norton is certified in Hawaii, Kansas, and Missouri to perform asbestos inspections. Ms. Norton has performed numerous asbestos inspections for local municipalities, Verizon Wireless, local government agencies, school districts, property owners and local housing authorities. She is certified in Hawaii, Kansas and Missouri to perform lead-based paint (LBP) inspections. She has performed numerous lead inspections for property owners, local housing authorities and the MDNR BVCP. She has worked with property owners to achieve compliance to ensure tenant safety. She is experienced with calibrating equipment necessary for assessing contaminants. She continues to implement safety protocols and derives at compliance solutions for municipal and private industry clients.

Mold Inspections and Reporting - Ms. Norton has performed numerous inspections for the presence of mold and mold spores, and has sampled outdoor and indoor air for the presence of contaminants, including mold. Ms. Norton is proficient in the use a Delmhorst Moisture Check® moisture meter to determine the percent moisture and/or moisture content of suspect building materials. She is skilled in the use of a hygrometer to determine the relative humidity of the areas assessed. Ms. Norton performed air monitoring and tape sampling, to identify the presence of mold in individual residents, and large commercial and industrial facilities.

Carbon Black- Ms. Norton was an expert witness in a legal case involving Carbon Black; petroleum based carcinogenic dust. She participated in lengthy depositions involving Native American Tribal communities. She led a team of sampling professionals on a multi-location sampling event to identify the presence of Carbon Black. The sampling event was executed to obtain representative particulate samples from several commercial, residential, and government locations in Ponca City, Oklahoma. The samples were characterized for carbon black (a submicron black carbon powder commercially produced under controlled conditions by burning hydrocarbons in insufficient air utilizing Transmission Electron Microscopy [TEM] and Energy Dispersive X-ray [EDX]). The overall goals of particulate sampling were to collect samples that were representative of the contaminated area. To achieve this goal, areas that appeared to contain black particulates were sampled. The purpose of collecting black particulate was to identify if these samples contained materials consistent or inconsistent with manufactured carbon black. Her efforts were instrumental in settling the legal case and for ensuring stricter standards for the Carbon Black manufacturing company.

Environmental Analysis and Permitting

Environmental Site Assessments- Ms. Norton has performed numerous Phase I and Phase II Environmental Site Assessments (ESA's) for various private and municipal clients including local Brownfield's task groups, the National Parks Service, Verizon Wireless, local city governments, and real estate development companies. She recently participated in the KC Live development project in downtown Kansas City, Missouri where she completed oversight requirements of the contract. Ms. Norton has experience in completing National Environmental Policy Act (NEPA) reports that identify native endangered or threatened species in sensitive areas. She has researched, completed, and implemented an Environmental Impact Statement (EIS) at a public airport in Virginia.

Environmental Compliance- Ms. Norton was responsible for bringing a private company into a compliance status with the creation and implementation of a company wide Storm Water Pollution Prevention Plan. Local, state and federal regulations were researched and addressed to cover

Rachel T Norton, Tetra Tech EM Inc.

manufacturing processes in place at the facility. Knowledge of state and local environmental regulations was shared with maintenance and truck garage staff to encourage compliance and reduction of hazardous substances. She was responsible for federal and state annual chemical inventory reporting including Form R and Tier II, Material Safety Data Sheet (MSDS) categorization, and permit renewal for Underground Storage Tanks (UST) and boilers.

Emergency Response and Preparedness

Graniteville Train Collision and Chlorine Release - In 2005, Ms. Norton assisted the Environmental Protection Agency (EPA) as a Superfund Technical Assessment and Response Team (START) member at the Graniteville Train Collision and Chlorine Release in Graniteville, South Carolina. She was responsible for implementing the FAST technology at the site for the rapid transmission of air monitoring data. She worked to establish evacuation and re-occupation zones for displaced residents. Ms. Norton was responsible for calibrating, maintaining, and compiling air-monitoring data from the mobile Area REAS units. She was also responsible for the inventory, calibration and maintenance of all monitoring and personal protective equipment at the site. Ms. Norton was able to quickly interpret air-monitoring results to derive the acceptable PPE (Level B or C) for the job at hand.

Space Shuttle Columbia Disaster, START Team Member - Ms. Norton participated in the N.A.S.A Space Shuttle Columbia STS 107 Mission Recovery Project. Ms. Norton worked in central Texas as an EPA S.T.A.R.T team member and directly supervised up to 42 individuals on a daily basis. She participated in grueling physical activities required in the field. Ms. Norton was directly responsible for digital photographic documentation, GPS coordinates, entering field data into a Personal Digital Assistant, and assigning sample identification numbers to recovered shuttle materials. Ms. Norton worked closely with representatives from the National Forest Service, EPA, the Tennessee Valley Authority and N.A.S.A for the duration of the project

Mercury Response- Ms. Norton is proficient in the latest emergency response training techniques; exercises and equipment expertise pertaining to mercury clean up efforts. She is trained and proficient in operation mercury detection devices including the Lumex and Jerome models. She has participated in over ten residential mercury clean-up projects and has participated in numerous mock mercury spill response scenarios. She is familiar with the chain of command on a mercury site that often involves representatives from the local poison control, fire and emergency medical teams.

Bioterrorism and Homeland Security- Ms. Norton worked extensively on a statewide Bioterrorism Needs Assessment Survey for the State of Iowa Department of Public Health. Her duties included researching relevant terms and equipment utilized during a bioterrorism attack. She worked closely with numerous health care facilities across the state to validate information and to relay the importance of accurate facility reporting. This high profile project required technical competency to complete tasks and adhere to strict time constraints.

Emergency Response Directory- Ms. Norton was the project manager tasked to complete a telephone and informational directory of emergency response agencies and associated contacts across the nation. The directory included detailed contact information for emergency response agencies such as local emergency planning committees; state emergency management agencies, poison control centers and the United States Coast Guard.

PROFESSIONAL ORGANIZATIONS/ASSOCIATIONS

"Environmental Management Commission", City of Kansas City, Missouri, Compliance Committee and Membership and Outreach Chair, October 27, 2006 to Present

"Friends of the Kaw", Protecting the Kansas River. Secretary, 2003 to January 1, 2007

Recycling and Resource Conservation Advisory Board, the City of Lawrence, Secretary, 2000 to 2003

"Bridging the Gap", Environmental Excellence Business Network, Kansas City, Missouri

"Household Hazardous Waste", Waste Reduction and Recycling, the City of Lawrence, Kansas City, Kansas and Missouri.

Member, Society of American Military Engineers, Kansas City, Missouri chapter, 2001 to Present

SECURITY CLEARANCES

General Services Administration (GSA), Heartland, Region 6 (as of 2002) DOD "L" security clearance (as of 2000)

Stephanie L. Luebbering Environmental Scientist Tetra Tech EM Inc.

PROFESSIONAL EXPERIENCE

Ms. Luebbering has a master's degree in environmental science, more than 6 years of consulting experience, and possesses a variety of skills and relevant professional experience.

Verizon Wireless Environmental Services

Ms. Luebbering currently serves as a regional program manager for Tetra Tech's Nationwide Service Agreement with Verizon Wireless Inc. and its legacy companies (i.e., Air Touch Cellular). In this capacity, Ms. Luebbering manages technical, administrative, and financial aspects of Verizon Wireless projects performed in five midwestern states. Contract projects include Phase I Environmental Site Assessments (ESAs); limited site investigations; Phase II ESAs; site remediation services; pollution prevention planning; worker health and industrial hygiene surveys; National Environmental Policy Act (NEPA) summary reports, including NEPA Categorical Exclusion checklists, wetland delineations, and biological evaluations; archaeological surveys; historic property or area surveys; and air permitting. Ms. Luebbering's management responsibilities include maintaining relationships with Verizon Wireless regional real estate managers and attorneys, network engineers, site acquisition consultants, state agencies (USFWS, SHPOs, state conservation agencies), tribal entities, and citizens identified through public involvement.

Because construction of cellular communication towers are federally regulated project by the Federal Communications Commission (FCC), new cellular towers and certain collocations project are subject to Section 106 consultation in accordance with the Advisory Council on Historic Preservation – 36 CFR 800 – and the Nationwide Programmatic Agreement for Review of Effects on Historic Properties for Certain Undertakings. Ms. Luebbering has successfully facilitated Section 106 reviews of over 50 cellular projects through consultations with State Historic Preservation Officers for identification of direct of visual effects those projects may impose on historic properties or resources.

Tenant Audits – Ms. Luebbering has also performed tenant environmental reviews at 10 properties in the Kansas City area. The purpose of the environmental reviews were to provide assistance to the property owner in evaluating and minimizing potential adverse effects to the property that could result from the presence, use, handling, and storage of hazardous substances by the tenants. During the environmental reviews, a data form was completed for each tenant, and certain observations were recorded. Based on the observations and Ms. Luebbering's judgment, conditions and concerns were identified and reported. In addition, if anomalous conditions were observed that may relate to hazardous substances, or in Tetra Tech's judgment could, in the future, become a condition that could impact the property, these were reported.

Section 128(a) Assessment – Phase I Investigation – For the Nebraska Department of Environmental Quality (NDEQ), Ms. Luebbering conducted an extensive Phase I Section 128(a) Environmental Site Assessment at PCS Nitrogen, an eligible Brownfields site. The site is a former nitrogen fertilizer manufacturing facility that is currently being demolished and the property is slated for redevelopment. Ms. Luebbering's responsibility for the Phase I Section 128(a) ESA included assessing potential RECs, writing a report providing conclusions regarding potential RECs and recommendations for further work. This project included interpretation of an Environmental Data Resources database report, historical aerials, historic topographic maps, city directory and county assessor information. She also conducted a

Stephanie L. Luebbering, Tetra Tech EM Inc.

file review at the NDEQ and EPA in order to research the historical use of the property and potential contamination sources on the site and from adjacent properties.

Section 128(a) Assessment - Phase II Investigation — Ms. Luebbering prepared a work plan, cost estimates, and sampling plan for the Section 128(a) Phase II Investigation at the Atlanta Elevator, Inc. site on behalf of NDEQ. The site is a vacant agricultural chemical distribution/mixing building. The purpose of the Phase II Investigation was to evaluate the presence of hazardous and/or toxic materials at the site. The Phase II activities included surveying the property boundaries, collecting samples from the buried tanker, from the aboveground storage tanks formerly used at the site, on-site soil samples, and on and offsite groundwater samples. A Section 128(a) Assessment Phase II report was prepared along with a Brownfields Property Profile Form.

Air Pollution Construction and Operating Permits, Polk County Iowa – Polk County, Iowa requires facilities that will have air emitting equipment such as an emergency generator to obtain a construction and operating permit from the Polk County Public Works Air Quality Division. Ms. Luebbering has prepared permit applications and obtained the permits for numerous private telecommunication towers proposed to be located in Polk County, Iowa.

Resource Conservation and Recovery Act (RCRA) – For the Environmental Protection Agency (EPA), Ms. Luebbering has conducted numerous inspection, evaluations, and assessments. Ms. Luebbering has completed several environmental indicator (EI) reports for facilities in Kansas and Missouri. EI evaluations measure a RCRA corrective action facility's progress toward controlling human exposure and contamination migration. She has also conducted Compliance Evaluation Inspections (CEI) at more than 20 facilities and Compliance Assistance Visits (CAV) at more than 50 junior high and high schools across Iowa. During the course of CEIs and CAVs, Ms. Luebbering interviewed owners, operators, and facility representatives; observed and documented facility operations, with a focus on waste management practices; and prepared reports of potential violations for EPA review.

Hazard Ranking – Ms. Luebbering has prepared a Hazard Ranking Score document record for a former former cast piston manufacturer facility in Nebraska and a former lead and barium mining area in Missouri. She collected and assessed a range of related documents, including previous EPA and state assessments, private evaluations sponsored by the facility, and discovery documents generated by potential responsible parties; wrote descriptions of the nature and extent of contamination and quantified the number of targets and the intensity of their exposure; and calculated a preliminary hazard ranking score. Ms. Luebbering also prepared a hazard ranking assessment for the Richwoods Area 10 in Washington County, Missouri a former mining district for inclusion on the National Priorities List. The assessment included collection and assessment of a range of related documents, including previous EPA and Missouri Department of Natural Resources mining documents and well logs, and interpretation of analytical data collected from the site groundwater, soil, and source areas. A description of the nature and extent of contamination and quantified the number of targets and the intensity of their exposure was determined, and a preliminary hazard ranking score was calculated.

Preliminary Assessments and Site Investigations: Ms. Luebbering has also conducted numerous preliminary assessments and site investigations and inspections for the EPA in Iowa, Kansas, and Nebraska. Ms. Luebbering has supervised Geoprobe crews; collected soil and groundwater samples from Geoprobe sample points and groundwater samples from drinking water wells; collected access agreements from property owners; and interpreted analytical results and other documentation to develop recommendations for future action.

National Environmental Policy Act – Under the 1969 National Environmental Policy Act (NEPA), any federally-fund project required a study to determine the impact on the surrounding environment prior to

its inception. General Services Administration (GSA) was disposing of the real property at the National Imagery and Mapping Agency site in St. Louis, Missouri. As part of the disposal process, GSA must prepare an Environmental Assessment (EA) to identify the affected environment and the potential environmental consequences of the federal action of the property transaction. Ms. Luebbering researched the affected environment and the environmental consequences of the proposed federal action and, with the Tetra Tech EM Inc. team, prepared the EA for public notice.

ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2009 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EDR and its logos (including Sanborn and Sanborn Map) are trademarks of Environmental Data Resources, Inc. or its affiliates. All other trademarks used herein are the property of their respective owners.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 06/30/2009 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
BIRCH TELECOM STYRENE ODOR	2115 CENTRAL AVENUE	ESE 1/4 - 1/2 (0.451 mi.)	20	70
PCB INC - MISSOURI	2100 WYANDOTTE ST	ESE 1/4 - 1/2 (0.492 mi.)	A24	78

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 4 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 11/12/2008 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
QUALITY HILLS CLEANERS	606 W 17TH ST	NE 1/8 - 1/4 (0.234 mi.)	8	17

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properites addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments

A review of the US BROWNFIELDS list, as provided by EDR, and dated 10/01/2008 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WEST SIDE LIBRARY	2017 WEST PENNWAY BLVD.	S 1/8 - 1/4 (0.134 mi.)	2	8

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 11/12/2008 has revealed that there are 5 RCRA-NonGen sites within approximately 0.25 miles of the target property.

MO DRYCLEANERS: A listing of drycleaner facilities that are potentially eligible for reimbursement of department approved cleanup costs under the Drycleaning Environmental Response Trust Fund.

A review of the MO DRYCLEANERS list, as provided by EDR, and dated 07/20/2009 has revealed that there is 1 MO DRYCLEANERS site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
QUALITY HILLS CLEANERS	606 W 17TH ST	NE 1/8 - 1/4 (0.234 mi.)	8	17

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

Environmental Interest/Information System

The MO-DNR (Missouri Department of Natural Resources) program involves a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

RCRA-NonGen

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Comments: 01/12/00 HRM Reviewed file for ranking purposes. Sent status update letter.

> 02/24/00 HRM Reviewed response. Asked for closure documention. 01/20/01 HRM Ranked file using new system. RP has not responded to any update letters. Possible candidate for investigations list? 3/13/01 JLG call from Norman Gardner, handling the site - got our status request letter & is preparing to respond with documents regarding closure. Will send them within 30 days.

> 4/30/01 MAS Rev'd CR and requested add't info for9 items and requested SC work plan. 5/29/01 MAS Rec'd a phone call from Mr. Molley's attorney, John Edgar, asking for a couple of weeks to respond to the closure report review letter. OK 6/14/01 MAS rec'd phone call from Mr. Edgar to inform the dept. that he was intending on hiring a consulting firm to address the site characterization requests and asked that he be given thirty days to turn in a work plan and address the closure items. 11/14/01 MAS: rev'd request for extension for

> submittal of WP, gave them 30 days to respond with WP. Reviewed response letter which took care of items 4,5,6 and 7 of the April 30, 2001 dept letter. 2/5/02 ET Reviewed Dec 18, 2001 letter. Only item #9 is outstanding. Appr'd test in the utility manholes. 7/17/02 ET Reviewed results of vapor testing. Drafted a NFA. 03/21/07 - Entered NFA date in database. Unclear why it was never entered

before. - LL

4/14/95 JM APPROVED CAP MODIFICATIONS. AWAITING ACTIVITIES UPDATE. 8/9/99 kk Comments:

> sent update letter for CAP plan that was approved on 4/14/95. 12/14/00 kk rev SC work plan (11/30/00). Approved 10 soil borings to confirm contamination on and off-site. Upto eight of the borings will be converted into gw monitoring wells. 9/14/01 kk rev file. Reg update on SC plan. 12/20/01 kk rev response letter dated November 15, 2001. Sent response back indicating we still need site characterization work. 1/17/03BAS - sent request update letter 1/15/04 MLM- Review add site charact report with recommendations/proposal. 7 borings have benzene or TPH over soil limits. 11 wells have BTEX or TPH over gw limits. Existing well EW-1 has free product. PROPOSAL recomments 1. Perform a short term (four events) high vacuum extraction (HVE) recovery at wells MW-1, MW-2, MW-3, and EW-1 to recover free product and groundwater containing elevated concentrations of BTEX and TPH. 2. Provide a summary report for the HVE.3. Prepare an encroachment permit for drilling in off-site areas in the city right-of-way. 4. Install 5 permanent off-site monitoring wells. 5. Prepare a site characterization report. Approved, but indicated MRBCA data could be collected at the same time. Requested one additional well located SW of EW1 with free product. They can choose for: 60 days for new proposal or may continue with work plan as writing (with extra well) gave 160 days for report. 02/19/04 MLM - Review letter from consultant indicating PSTIF will not cover costs of survey for off-site drilling (\$6000), will only act when MDNR and PSTIF agree. Spoke to Dave Pate and we agree to have them collect MRBCA data and perform initial phases of risk assessment to determine ifoff-site investigation is necessary. Send letter stating so. 04/29/2005 - Found two work plans from different consultants. Contacted Fine Environmental. Received fax of letter from owner representative stating new consultant is Fine Environmental. Approved Work Plan for 10 borings with 6 wells. - LL 9/27/05:HM:revd T-1 and 2 report of July 19, 05. Regestd response to 5 items. 10/25/05 - Reviewed responses to risk assessment comments. All items addressed adequately. Requested GW monitoring report in 90 days, and free product recovery report in 30 days. - LL 8/21/06 MA rev a limited SC/groundwater monitoring report. FP is still present in EW-1, MW-12, MW-14, and MW-18 at a thickness that ranges between 1 to 7 inches. The HVE events have been successful in FP recovery efforts during which most of the FP was recovered from MW-14 and MW-18. However, a measurable amount of FP is still present in EW-1 and MW-12.

Therefore, concurred with recommendations to continue FP recovery/groundwatermonitoring activities to establish plume stability. 1/10/08 vg rev gwmr, FP still present in EW-1, need to continue FPR activities & GWM. Also advised that their Tier 2 SSTLs were not properly calculated due to use of improper value for FOC. SSTLs need to be recalculated. Also need to determine the usability of gw for future domestic use pathway. Also need to replace or repair MW2 & MW3 because they are in an area where there has been FP and the gw levels have always been several feet above the top of the screened interval. 3/11/08 vg app wp for closure and replacement of MW-2 & MW-3, 3 HVE events for FPR, and 4 gwm events. Also reviewed response regarding FOC analysis, lab confirmed that the reported value has already been converted from organic matter to carbon content. That conversion was built into the lab's reporting method. Therefore the FOC value can be used directly as reported by lab. 10-16-08 VH- Reviewed a GWMR and HVE rpt: including a WP for additional HVE and GWM. Approved HVE and GWM with modifications: LNAPL recovery and GWM should continue untill reaching desired levels. Recommend pending plume stability evaluation untill LNAPL recovery is complete. 3/27/09 MAS: Rev'd a GWMR. MW1 and MW12 contianed free product. Concurred with FINE's plann to complete 3 HVE events and then complete the second round to GW monitoring. Requested a HVE and GWM report within 90 days.

Environmental Interest/Information System

The MO-DNR (Missouri Department of Natural Resources) program involves a Resource Assessment and Monitoring Program, biological criteria development, monitoring of targeted sites to determine compliance with the designated use of aquatic life protection in the standards, monitoring for 303(3) purposes, and the development of a stream classification framework.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal Brownfields sites

MO BROWNFIELDS: Brownfields Site List

Brownfields are sites where redevelopment and reuse is hampered by known or suspected contamination with hazardous substances. While many brownfield sites are minimally contaminated, potential environmental liability can be a problem for owners, operators, prospective buyers and financial institutions. Because of the large number of these sites, their economic impact especially in heavily industrial areas is substantial.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 11/12/2008 Date Data Arrived at EDR: 11/18/2008 Date Made Active in Reports: 03/16/2009

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Date Data Arrived at EDR: 03/01/2007 Date Made Active in Reports: 04/10/2007

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995 Date Data Arrived at EDR: 07/03/1995 Date Made Active in Reports: 08/07/1995

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Elevation: 895 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 39094-A5 KANSAS CITY, MO

Most Recent Revision: 1996

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

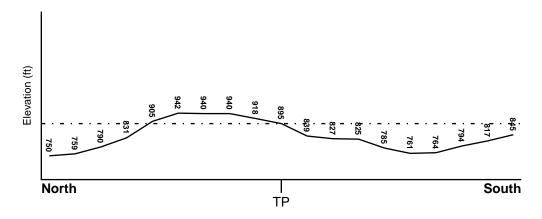

TOPOGRAPHIC INFORMATION

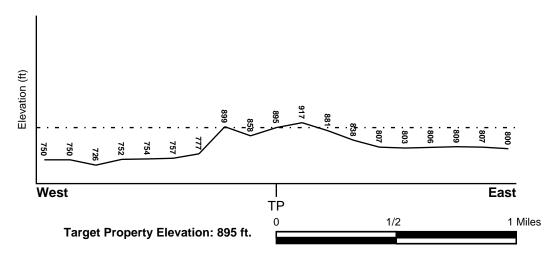

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID Not Reported LOCATION FROM TP GENERAL DIRECTION GROUNDWATER FLOW

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after

August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

RADON

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.
